

ONEM2M TECHNICAL SPECIFICATION		
Document Number	TS-0002-V3.1.2	
Document Name:	Requirements	
Date:	2019-02-25	
Abstract:	The present document contains an informative functional role model and normative technical requirements for oneM2M.	

This Specification is provided for future development work within oneM2M only. The Partners accept no liability for any use of this Specification.

The present document has not been subject to any approval process by the oneM2M Partners Type 1. Published oneM2M specifications and reports for implementation should be obtained via the oneM2M Partners' Publications Offices.

About oneM2M

The purpose and goal of oneM2M is to develop technical specifications which address the need for a common M2M Service Layer that can be readily embedded within various hardware and software, and relied upon to connect the myriad of devices in the field with M2M application servers worldwide.

More information about one M2M may be found at: http://www.oneM2M.org

Copyright Notification

No part of this document may be reproduced, in an electronic retrieval system or otherwise, except as authorized by written permission.

The copyright and the foregoing restriction extend to reproduction in all media.

1 Scope

The present document contains an informative functional role model and normative technical requirements for one M2M.

2 References

2.1 Normative references

References are either specific (identified by date of publication and/or edition number or version number) or non-specific. For specific references, only the cited version applies. For non-specific references, the latest version of the referenced document (including any amendments) applies.

The following referenced documents are necessary for the application of the present document.

[1] 3GPP TS 22.368: "Service requirements for Machine-Type Communications (MTC); Stage 1".

2.2 Informative references

References are either specific (identified by date of publication and/or edition number or version number) or non-specific. For specific references, only the cited version applies. For non-specific references, the latest version of the referenced document (including any amendments) applies.

The following referenced documents are not necessary for the application of the present document but they assist the user with regard to a particular subject area.

[i.1] oneM2M Drafting Rules.

NOTE: Available at http://www.onem2m.org/images/files/oneM2M-Drafting-Rules.pdf.

[i.2] oneM2M TS-0011: "Common Terminology".

[i.3] oneM2M TR-0008: "Security Analysis".

3 Definition of terms and abbreviations

3.1 Terms

For the purposes of the present document, the terms given in oneM2M TS-0011 [i.2] apply.

3.2 Abbreviations

For the purposes of the present document, the following abbreviations apply:

AE Application Entity

API Application Program Interface

BBF BroadBand Forum
CHA Continua Health Alliance
CPU Central Processing Unit
DM Device Management

GBA Generic Bootstrapping Architecture

GSMA Global System for Mobile Communications Association

GW GateWay

HGI Home Gateway Initiative HSM Hardware Security Module

IP	Internet Protocol
MTC	Machine Type Communications
OMA	Open Mobile Alliance
OSR	Overall System Requirements
OWL	Web Ontology Language
QoS	Quality of Service
RDF	Resource Description Framework
SMS	Short Message Service
UICC	Universal Integrated Circuit Card
USIM	UMTS Subscriber Identity Module
USSD	Unstructured Supplementary Service Data
WAN	Wide Area Network
WLAN	Wireless Local Area Network

4 Conventions

The key words "Shall", "Shall not", "May", "Need not", "Should", "Should not" in the present document are to be interpreted as described in the oneM2M Drafting Rules [i.1].

5 Introduction to the M2M ecosystem

5.1 Functional roles description

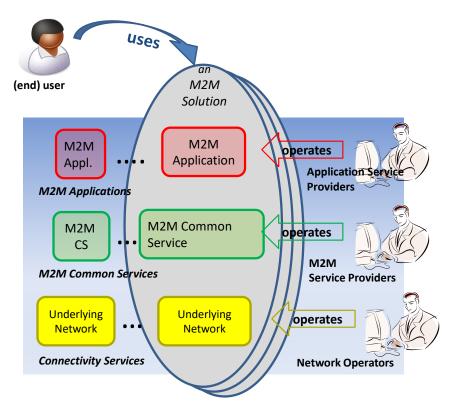

Figure 1: Functional Roles in the M2M Ecosystem

- 1) The *User* (individual or company aka: end-user) fulfils all of the following criteria:
 - Uses an M2M solution.
- 2) The Application Service Provider fulfils all of the following criteria:

- Provides an M2M Application Service.
- Operates M2M Applications.
- 3) The M2M Service Provider fulfils all of the following criteria:
 - Provides M2M Services to Application Service Providers.
 - Operates M2M Common Services.
- 4) The Network Operator fulfils all of the following criteria:
 - Provides *Connectivity* and related services for *M2M Service Providers*.
 - Operates an *Underlying Network*. Such an Underlying Network could e.g. be a telecom network.

Any of the above functional roles may coincide with any of the other roles. These functional roles do not imply business roles or architectural assumptions.

6 Functional Requirements

6.1 Overall System Requirements

Table 1: Overall System Requirements

Requirement ID	Description	Release
OSR-001	The oneM2M System shall allow communication between M2M Applications by	Implemented
	using multiple communication means based on IP access.	in Rel-1
OSR-002a	The oneM2M System shall support communication means that can	Implemented
	accommodate devices with constrained computing (e.g. small CPU, memory,	in Rel-1
	battery) or communication capabilities (e.g. 2G wireless modem, certain WLAN	
	node).	
OSR-002b	The oneM2M System shall support communication means that can	Implemented
	accommodate devices with rich computing capabilities (e.g. large CPU,	in Rel-1
000 000	memory) or communication (e.g. 3/4G wireless modem, wireline).	
OSR-003	The oneM2M System shall support the ability to maintain application-to-	Not
See REQ-2015-	application communication in coordination with an application session for those	implemented
0626R01	M2M Applications that require it.	
OSR-004	The oneM2M System shall support session-less application communications for	Implemented
000.005	those M2M Applications that require it.	in Rel-1
OSR-005	The oneM2M System shall be able to expose the services offered by	Partially
	telecommunications networks to M2M Applications (e.g. SMS, USSD,	implemented
	localization, subscription configuration, authentication (e.g. Generic	(see note 9)
	Bootstrapping Architecture), etc.),subject to restriction based on Network	
OSR-006	Operator's policy. The oneM2M System shall be able to reuse the services offered by Underlying	Partially
USK-000	Networks to M2M Applications and/or M2M Services by means of open access	implemented
	models (e.g. OMA, GSMA OneAPI framework). Examples of available services	(see note 10)
	are:	(See Hote 10)
	IP Multimedia communications.	
	Messaging.	
	Location.	
	Charging and billing services.	
	 Device information and profiles. 	
	Configuration and management of devices. Trippering positivities of devices.	
	 Triggering, monitoring of devices. Small data transmission. 	
	• Group management.	
OCD 007	(see note 1).	luca mile una e un 4l
OSR-007	The oneM2M System shall provide a mechanism for M2M Applications to interact with the Applications and data/information managed by a different M2M	Implemented in Rel-1
		III Kei- I
	Service Provider, subject to permissions as appropriate.	1

00	Description	Release
OSR-008	The oneM2M System shall provide the capability for M2M Applications to	Implemented
	communicate with an M2M Device (i.e. application in the device) without the	in Rel-1
	need for the M2M Applications to be aware of the network technology and the specific communication protocol of the M2M Device.	(see note 11)
OSR-009	The oneM2M System shall support the ability for single or multiple M2M	Implemented
0311-009	Applications to interact with a single or multiple M2M Devices/Gateways	in Rel-1
	(application in the device/gateway) (see note 2).	
OSR-010	The oneM2M System shall support mechanisms for confirmed delivery of a	Implemented
	message to its addressee to those M2M Applications requesting reliable	in Rel-1
	delivery to detect failure of message within a given time interval.	
OSR-011a	The oneM2M System shall be able to request different communication paths,	Implemented
	from the Underlying Network based on Underlying Network Operator and/or	in Rel-1
	M2M Service Provider policies, routing mechanisms for transmission failures.	(see note 12)
OSR-011b	The oneM2M System shall be able to request different communication paths	Not
000 010	from the Underlying Network based on request from M2M Applications.	implemented
OSR-012	The oneM2M System shall support communications between M2M Applications	Implemented in Rel-1
	and M2M Devices supporting M2M Services by means of continuous or non- continuous connectivity.	in Kei-i
OSR-013	The oneM2M System shall be aware of the delay tolerance acceptable by the	Implemented
0311-013	M2M Application and shall schedule the communication accordingly or request	in Rel-1
	the Underlying Network to do it, based on policies criteria.	III IXOI I
OSR-014	The oneM2M System shall be able to communicate with M2M Devices, behind	Implemented
	an M2M Gateway that supports heterogeneous M2M Area Networks.	in Rel-1
OSR-015	The oneM2M System shall be able to assist Underlying Networks that support	Partially
	different communication patterns including infrequent communications, small	implemented
	data transfer, transfer of large file and streamed communication.	(see note 13
OSR-016	The oneM2M System shall provide the capability to notify M2M Applications of	Implemented
	the availability of, and changes to, available M2M Application/management	in Rel-1
	information on the M2M Device/Gateway, including changes to the M2M Area	
OSR-017	Network.	Implementes
USK-017	The oneM2M System shall be able to offer access to different sets of M2M Services to M2M Application Providers. The minimum set of services are:	Implemented in Rel-1
	Connectivity management.	111 1761-1
	Device management (service level management).	
	Application Data management.	
	In order to enable different deployment scenarios, these services shall be made	
	available by the oneM2M System, individually, as a subset or as a complete set	
	of services.	
	or services.	
OSR-018	The oneM2M System shall be able to offer M2M Services to M2M Devices	Implemented
OSR-018	The oneM2M System shall be able to offer M2M Services to M2M Devices roaming across cellular Underlying Networks, subject to restriction based on	with some

OSR-031	removal, retrieval and update) of the membership of a group. The oneM2M System shall be able to support a group as a member of another	Implemented
O3K-031	group.	in Rel-1
OSR-032	The oneM2M System shall be able to support Event Categories (e.g. normal,	Implemented
00.1.002	urgency) associated with data for M2M Applications when collecting, storing	in Rel-1
	and reporting that data (see note 6).	
OSR-033	Based on the Dynamic Device/Gateway Context of the M2M Gateway and/or	Partially
	Device and the defined Event Categories, the oneM2M System shall provide	implemented
	the capability to dynamically adjust the scheduling of reporting and notification	(see note 15
000 004	of the M2M Device/Gateway (see note 17).	N
OSR-034	The oneM2M System shall support seamless replacement of M2M Devices as	Not
OSR-035	well as M2M Gateways (e.g. redirecting traffic, connection, recovery, etc.). The oneM2M System shall support the exchange of non-M2M Application	implemented Not
USK-033	related relevant information (e.g. Device/Gateway classes) between M2M	implemented
	Device/Gateway and M2M Service Infrastructure for the purpose of efficient	Implemented
	communication facilitation. This includes the capability for an M2M Device to	
	report its device class to M2M Service Infrastructure and for the M2M Service	
	Infrastructure to inform M2M Device of the M2M Service Infrastructure	
	capabilities.	
OSR-036	The oneM2M System should provide mechanisms to accept requests from	Not
	M2M Application Service Providers for compute/analytics services.	implemented
OSR-037	The oneM2M System shall enable an M2M Application to request to send data,	Not
	in a manner independent of the Underlying Network, to the M2M Applications of a group of M2M Devices and M2M Gateways in geographic areas that are	implemented
	specified by the M2M Application.	
OSR-038	The oneM2M System shall support the inclusion of M2M Application's QoS	Not
33.1.333	preference in service requests to Underlying Networks.	implemented
OSR-039	The oneM2M System shall be able to authorize service requests with QoS	Not
	preference at service level, but shall pass M2M Application's QoS preference in	implemented
	service requests to Underlying Network for authorization and granting or	
	negotiation of the service QoS requests.	
OSR-040	The oneM2M System shall be able to leverage multiple communication	Not
	mechanisms (such as USSD or SMS) when available in the Underlying	implemented
OSR-041	Networks. The oneM2M System shall provide a mechanism, which supports the addition	(see note 16
USK-04 I	of new M2M Services to the oneM2M System as independent portable modules	Partially implemented
	by means of the oneM2M interfaces.	(see note 21
OSR-042	The oneM2M System shall be able to support different QoS-levels specifying	Not
- · -	parameters, such as guaranteed bitrate, delay, delay variation, loss ratio and	implemented
	error rate, etc.	
OSR-043	The oneM2M System shall be able to verify that members of a group support a	Implemented
	common set of functions.	in Rel-1
OSR-044	The oneM2M System shall support communication with M2M Devices which	Implemented
	are reachable based on defined time schedules (e.g. periodic) as well as M2M	in Rel-1
000 045	Devices which are reachable in an unpredictable and spontaneous manner.	A.I.
OSR-045a	The oneM2M System shall be able to receive and utilize information provided	Not
OSB 0454	by the Underlying Network about when an M2M Device can be reached.	implemented
OSR-045b	The oneM2M System shall be able to utilize reachability schedules generated by either the M2M Device or the Infrastructure Domain.	Partially implemented
	by States the Miziri Device of the Inhastructure Dolllam.	(see note 18
OSR-046	The oneM2M System shall be able to support a capability for the M2M	Not

Requirement ID	Description	Release
OSR-047	The oneM2M System shall be able to support mechanism for the M2M Devices and/or Gateways to report their geographical location information to M2M Applications (see note 7).	Implemented in Rel-1
OSR-048	The oneM2M System shall provide an M2M Service that allows M2M Devices and/or Gateways to share their own or other M2M Devices' geographical location information (see note 7).	Implemented in Rel-1
OSR-049	The oneM2M System shall be able to provide the capability for an M2M Application to selectively share data (e.g. access control) among applications.	Implemented in Rel-1
OSR-050	If communication over one communication channel provided by the Underlying Network can only be triggered by one side (Infrastructure Domain or Field Domain), and alternative channel(s) is (are) available in the other direction, the oneM2M System shall be able to use the alternative channel(s) to trigger bidirectional communication on the first channel.	Implemented in Rel-1
OSR-051	Depending on availability of suitable interfaces provided by the Underlying Network the oneM2M System shall be able to request the Underlying Network to broadcast/multicast data to a group of M2M Devices in a specified area.	Implemented in Rel-1
OSR-052	The oneM2M System shall be able to select an appropriate Underlying Network to broadcast or multicast data depending on the network's broadcast/multicast support and the connectivity supported by the targeted group of M2M Devices/Gateways.	Not implemented
OSR-053	The oneM2M System shall provide a means that enables backward compatibility of interfaces among different releases (see note 8).	Not implemented
OSR-054	The oneM2M System shall be able to support an M2M Application, M2M Device, or M2M Gateway to obtain access to resources of another M2M Application, M2M Device, or M2M Gateway.	Implemented in Rel-1
OSR-055	The oneM2M System shall be able to provide the capability of M2M Applications to exchange data with one or more authorized M2M Applications which are not known in advance.	Implemented in Rel-1 (see note 20)
OSR-056	The oneM2M System shall enable discovery of usable M2M Applications on an M2M Gateway or at an M2M Device.	Implemented in Rel-1
OSR-057	The oneM2M System shall enable discovery of M2M Gateways and M2M Devices available to an M2M Application for data exchange.	Implemented in Rel-1
OSR-058	The oneM2M System shall be able to provide time stamps as needed by Common Service Functions.	Implemented in Rel-1
OSR-059	The oneM2M System shall be able to support Role-Based Access Control based on M2M Service Subscriptions.	Implemented in Rel-1
OSR-060	The oneM2M System should support time synchronization with an external clock source.	Not implemented
OSR-061	M2M Devices and M2M Gateways may support time synchronization within the oneM2M System.	Not implemented
OSR-062	The oneM2M System shall enable means of testing the connectivity towards a set of M2M Applications.	Not implemented
OSR-063	The oneM2M System shall be able to manage the scheduling of M2M Service Layer connectivity and messaging between the Infrastructure Domain and M2M Devices/Gateways.	Implemented in Rel-1
OSR-064	The oneM2M System shall be able to aggregate messages depending on message delay tolerance and/or category.	Implemented in Rel-1
OSR-065	The oneM2M System shall provide mechanisms that enable a M2M Service Provider to distribute processing functions to his M2M Devices/Gateways in the Field Domain.	Not implemented
OSR-066	The oneM2M System shall be able to support the placement and operation of M2M Applications in selected M2M Nodes per criteria requested by M2M Application Service Providers, subject to access rights.	Implemented in Rel-1
OSR-067	The oneM2M System shall be able to take operational and management action as requested by M2M Applications.	Implemented in Rel-1
OSR-068	When available from an Underlying Network, the oneM2M System shall be able to provide the capability to retrieve and report the information regarding whether an M2M Device is authorized to access Underlying Network services.	Not implemented
OSR-069	When available from the Underlying Network, the oneM2M System shall be able to maintain the M2M Service Operational Status of a M2M Device and update it when the Underlying Network connectivity service status changes.	Not implemented
OSR-070	The oneM2M System shall be able to provide the capability to notify an authorized M2M Application when the M2M Service Administrative State or M2M Service Operational Status of an M2M Device changes, if that M2M Application has subscribed for such notifications.	Partially implemented (see note 19)

Requirement ID	Description	Release
OSR-071	The oneM2M System shall be able to enable an authorized M2M Application to	Implemented
	set the M2M Service Administrative State of a M2M Device.	in Rel-1
OSR-072	The oneM2M System shall be able to initiate a set of actions defined by a M2M	Not
	Application (e.g. trigger upon a threshold, compare a value,) that impacts	implemented
	another Application.	
OSR-073	The oneM2M System shall support distributed transactions to multiple devices	Not
See REQ-2015-	or applications where the transaction includes the characteristics of atomicity,	implemented
0529R03	consistency, isolation and durability.	
OSR-074	The oneM2M System shall support the completion of distributed transactions to	Not
See REQ-2015-	multiple devices or applications while maintaining the order of the operations	implemented
0529R03	and performing the transaction within a given time frame.	
OSR-75	The oneM2M System shall be able to collect, store Time Series Data.	Implemented
See REQ-2015-		in Rel-2
0546R01		
OSR-76	The oneM2M System shall be able to detect and report the missing data in time	Implemented
See REQ-2015-	series.	in Rel-2
0546R01		

Requirement ID	Description	Release
OSR-077	The oneM2M System shall be capable of collecting asynchronous responses	Not
See REQ-2015-	pertaining to the broadcasted messages.	implemented
0558R01		
OSR-078	The oneM2M System shall support gateway-based capabilities for Event	Not
See REQ-2015-	management, e.g. capability for arbitration of the resulting processing.	implemented
573R01		
OSR-079	The oneM2M System shall provide the capability to notify a device hosting a	Not
See REQ-2015-	group of applications when alternative registration points for that group of	implemented
574R01	applications are available (e.g. via different underlying networks) based on the	
	service requirements of each of the applications hosted.	
OSR-080	The oneM2M System shall provide the capability to register applications in	Not
See REQ-2015-	group or independently, based on their service requirements.	implemented
574R01		
OSR-081	The oneM2M System shall be able to collect data that is broadcast (e.g. in	Not
See REQ-2015-	industrial bus systems) according to data collection policies.	implemented
0553R02		
OSR-082	The oneM2M System shall allow the update, modification, or deletion of data	Not
See REQ-2015-	collection policies within an M2M Application.	implemented
0553R02		
OSR-083	The oneM2M System shall be able to filter information from oneM2M Devices	Not
See REQ-2015-	for a given set of parameters.	implemented
0593R02		
OSR-084	The oneM2M System shall be able to handle an event notification from an	Not
See REQ-2015-	authorized M2M Application which triggers actions to be performed on the M2M	implemented
0595R04	Device (example: Turn on or off the monitoring).	'
OSR-085	The oneM2M System shall support resource caching of registered M2M	Not
See REQ-2015-	Devices. Resource caching is a mechanism through which the oneM2M System	implemented
0608	retains resources of a registered M2M Device in temporarily inactive state by	
0000	moving the resources to a temporary storage e.g. cache bin.	
OSR-086	The oneM2M System shall enable M2M Gateways to discover M2M	
See REQ-2015-	Infrastructure Nodes and M2M Devices available for data exchange.	Implemented
0611R02	Third did did to though and the portions available for data excitatings.	in Rel-1

0048R02	information about the common peer entity as needed.	
OSR-139	The oneM2M System shall enable correlation of the "full registration" and the	future
See REQ-2017-	"lightweight registration" instances pertaining to a common peer entity.	releases?
0048R02		
OSR-140	The oneM2M System shall enable differentiation of the "full registrations" and	future
See REQ-2017-	the "lightweight registrations" instances pertaining to a common peer entity.	releases?
0048R02		

- NOTE 1: The set of features or APIs to be supported depends on the M2M Common Services and access to available APIs.
- NOTE 2: The relation M2M Network Application to M2M Device/Gateway may be 1:1, 1:n, n:1 and/or n:m.
- NOTE 3: No roaming on M2M Service level is assumed by this requirement.
- NOTE 4: M2M Service Subscriptions are not Application subscriptions (e.g. Home Energy Management).
- NOTE 5: Transparent exchange of information implies information that is mainly interpreted by the M2M Application and the Underlying Network Provider.
- NOTE 6: Based on the Event Categories and via interworking with Underlying Networks, the oneM2M System can support differentiated services (by providing Quality-of-Service) requested by M2M Applications.
- NOTE 7: Geographical location information can be more than simply longitude, latitude and Geo-fence event.
- NOTE 8: "means" above does not imply only technical mechanisms, e.g. there is no protocol version negotiation.
- NOTE 9: In Rel-1 only GBA and localization are available.
- NOTE 10: Rel-1 covers: Location, Charging and billing services, Configuration and management of devices, Device information and profiles, Triggering.
- NOTE 11: This requirement applies to M2M Devices but not to devices interworked via M2M Area Networks.
- NOTE 12: Based on device triggering.
- NOTE 13: No Support for streamed communication.
- NOTE 14: Limitations to trigger (via Tsp interface) devices in a roamed-to network.
- NOTE 15: Detail syntax to describe Dynamic Context is not specified.
- NOTE 16: It is possible to deliver CoAP over SMS, but currently SMS message delivery interfaces are not explicitly defined.
- NOTE 17: For example, if the battery of Gateway is remained only 10% or below, the Gateway notifies the M2M service platform of the status. The M2M Application in the Infrastructure node will adjust the scheduling of reporting and notification based on the Event Categories associated with each message. Consequently, the M2M Gateway operates longer.
- NOTE 18: Void.
- NOTE 19: Only the M2M Service Administrative State can be notified. M2M Service Operational Status is not implemented.
- NOTE 20: This can be implemented based on preconfigured access rights.
- NOTE 21: In Rel-1 this is supported by means of the Mca interfaces, mapping the new service module to an AE.
- NOTE 22: In Rel-2 data are stored in the CSE but never get retrieved by other entities except by subscribe/notify mechanism.
- NOTE 23: Unicast communications have been implemented in Release 1.
- NOTE 24: Definition of "real time" and how to specify timing and reliability requirements is TBD.

Management Requirements 6.2

Table 2: Management Requirements

Requirement ID	Description	Release
MGR-001	The oneM2M System shall be able to support management and configuration of M2M Gateways/ Devices including resource constrained M2M Devices.	Implemented in Rel-1
MGR-002	The oneM2M System shall provide the capability to discover the M2M Area	Implemented
	Networks including information about devices on those networks and the	in Rel-1
	parameters (e.g. topology, protocol) of those networks.	
MGR-003	The oneM2M System shall be able to provide the capability to maintain and	Implemented
	describe the management Information Model of devices and parameters	in Rel-1
	(e.g. topology, protocol) of M2M Area Networks.	
MGR-004	The oneM2M System shall support common means to manage devices	Implemented
	enabled by different management technologies (e.g. OMA DM, BBF TR069).	in Rel-1
MGR-005	The oneM2M System shall provide the capability to manage multiple devices in	Implemented
	a grouped manner.	in Rel-1
MGR-006	The oneM2M System shall provide the capability for provisioning and	Implemented
	configuration of devices in M2M Area Networks.	in Rel-1
MGR-007	The oneM2M System shall provide the capability for monitoring and diagnostics	Implemented
	of M2M Gateways/Devices in M2M Area Networks.	in Rel-1
MGR-008	The oneM2M System shall provide the capability for software management of	Implemented
	devices in M2M Area Networks.	in Rel-1
MGR-009	The oneM2M System shall provide the capability for rebooting and/or resetting	Implemented
	of M2M Gateways/Devices and other devices in M2M Area Networks.	in Rel-1
MGR-010	The oneM2M System shall provide the capability for authorizing devices to	Implemented
	access M2M Area Networks.	in Rel-1
MGR-011	The oneM2M System shall provide the capability for modifying the topology of	Implemented
	devices in M2M Area Networks, subject to restriction based on M2M Area	in Rel-1
	Network policies.	
MGR-012	Upon detection of a new device the M2M Gateway shall be able to be	Partially
	provisioned by the M2M Service Infrastructure with an appropriate configuration	implemented
	which is required to handle the detected device.	(see note)
MGR-013	Void.	
MGR-014	The oneM2M System shall be able to retrieve events and information logged by	Implemented
	M2M Gateways/ Devices and other devices in M2M Area Networks.	in Rel-1
MGR-015	The oneM2M System shall be able to support firmware management	Implemented
	(e.g. update) of M2M Gateways/ Devices and other devices in M2M Area	in Rel-1
MOD 040	Networks.	
MGR-016	The oneM2M System shall be able to retrieve information related to the Static	Implemented
	and Dynamic Device/Gateway Context for M2M Gateways/Devices as well as	in Rel-1
MOD 047	Device Context for other devices in M2M Area Networks.	lua un la una a un ta al
MGR-017	The oneM2M System shall be capable of correlating Access Management	Implemented
	elements provided by the technology specific Device Management Protocols to	in Rel-1
MCD 010	Access Management elements used by the oneM2M System.	Not
MGR-018 See REQ-2015-	The M2M Service Infrastructure shall be able to accept standardized configuration settings from an external configuration server to allow the M2M	Not implemented
0555R02	Devices to register.	Implemented
MGR-019	The M2M Device shall be able to accept standardized configuration settings	Not
See REQ-2015-	from an external configuration server in order to register to the oneM2M	implemented
0555R02	System.	Implemented
	no detection mechanism exists, but once an M2M Device is known at the Gatewa	v it can be
	ed via the GW through DM.	,

6.3 Semantics Requirements

6.3.1 Ontology Related Requirements

Table 3: Ontology Requirements

Requirement ID	Description	Release
ONT-001 TI	he M2M System shall support a standardized format for the rules/policies	Not
See REQ-2015- us	sed to define service logic.	implemented
0521R01	•	•
ONT-002 TI	The M2M System shall support modelling semantic descriptions of Things	Implemented
	including relationships among them) by using ontologies.	in Rel-2
0521R01		
ONT-003	he M2M System shall support a common modelling language for ontologies	Implemented
	e.g. OWL).	in Rel-2
0521R01		
ONT-004 TI	The M2M System should be able to provide translation capabilities from	Not
	lifferent modelling languages for ontologies to the language adopted by	implemented
	neM2M if the expressiveness of the imported ontology allows.	•
	he M2M System shall provide the capability to retrieve semantic descriptions	Not
	and ontologies stored outside of the M2M System.	implemented
0521R01	,	'
	The M2M System shall provide support for linking ontologies defined in the	Not
	ontext of the M2M System with ontologies defined outside this context.	implemented
0521R01	,	•
	The M2M System shall be able to support extending ontologies in the M2M	Not
	System.	implemented
0521R01		•
	The M2M System shall be able to use ontologies that contain concepts	Implemented
	epresenting aspects (e.g. a room) that are not represented by resources of	in Rel-2
	ne M2M System.	
	The M2M System shall be able to re-use common ontologies (e.g. location,	Not
	me ontologies, etc.) which are commonly used in M2M Applications.	implemented
0521R01		•
ONT-010 TI	he M2M System shall be able to support simultaneous usage of multiple	Implemented
	intologies for the same M2M resource.	in Rel-2
0521R01		
ONT-011 TI	The M2M System shall provide the capability for making ontology available in	Not
See REQ-2015- th	ne M2M System, e.g. through announcement.	implemented
0521R01		
ONT-012 TI	The M2M System shall be able to support mechanisms to import external	Not
See REQ-2015- or	intologies into the M2M System.	implemented
0521R01		
ONT-013	he M2M System shall be able to support update of ontologies.	Not
See REQ-2015-		implemented
0521R01		
	he M2M System shall enable functions for data conversion based on	Not
	ntologies.	implemented
0521R01		
	The M2M System shall be able to model devices based on ontologies which	Implemented
See REQ-2015- m	nay be available outside the M2M System (e.g. HGI device template).	in Rel-2
0521R01		
	he M2M System shall support storage, management and discovery of	Not
See REQ-2015- or	ntologies.	implemented
0521R01		
	The oneM2M System shall support a semantic relation ("Is Paired To")	Not
See REQ-2015- be	etween two M2M Devices.	implemented
0609		

6.3.2 Semantics Annotation Requirements

Table 4: Semantics Annotation Requirements

Requirement ID	Description	Release
ANN-001	The oneM2M System shall provide capabilities to manage semantic information	Implemented in
See REQ-2015- 0521R01	about the oneM2M resources, e.g. create, retrieve, update, delete, associate/link.	Rel-2
ANN-002 See REQ-2015- 0521R01	The oneM2M System shall support a common language for semantic description, e.g. RDF.	Implemented in Rel-2
ANN-003 See REQ-2015- 0521R01	The oneM2M System shall support semantic annotation of oneM2M resources for example application related data contained in containers.	Implemented in Rel-2
ANN-004 See REQ-2015- 0521R01	The oneM2M System shall support semantic annotation based on related ontologies.	Implemented in Rel-2
ANN-005 See REQ-2015- 0521R01	The oneM2M System shall provide the capability for making semantic descriptions available in the M2M System, e.g. announcement.	Implemented in Rel-2
ANN-006 See REQ-2015- 0521R01	The oneM2M System shall enable applications to retrieve an ontology representation related to semantic information used in the M2M System.	Not implemented
ANN-007 See REQ-2015- 0521R01	The oneM2M system shall provide capabilities to manage data quality descriptions of resource.	Not implemented

6.3.3 Semantics Query Requirements

Table 5: Semantics Query Requirements

Requirement ID	Description	Release
QRY-001	The oneM2M System shall provide capabilities to discover M2M Resources	Implemented
See REQ-2015-	based on semantic descriptions.	in Rel-2
0521R01		

6.3.4 Semantics Mashup Requirements

Table 6: Semantics Mashup Requirements

Requirement ID	Description	Release
MSH-001	The oneM2M System shall provide the capability to host processing functions	Not
See REQ-2015-	for mash-up.	implemented
0521R01		
MSH-002	The oneM2M System shall enable M2M Applications to provide processing	Not
See REQ-2015-	functions for mash-up.	implemented
0521R01		
MSH-003	The oneM2M System itself may provide pre-provisioned or dynamically created	Not
See REQ-2015-	processing functions for mash-up.	implemented
0521R01		
MSH-004	The oneM2M System shall be able to create and execute mash-ups based on	Not
See REQ-2015-	processing functions.	implemented
0521R01		
MSH-005	The oneM2M System shall be able to expose mash-ups as resources e.g.	Not
See REQ-2015-	virtual devices.	implemented
0521R01		

6.3.5 Semantics Reasoning Requirements

Table 7: Semantics Reasoning Requirements

Requirement ID	Description	Release
RES-001	The oneM2M System shall be able to update ontologies as a result of the	Not
See REQ-2015-	ontology reasoning.	implemented
0521R01		
RES-002	The oneM2M System shall be able to support semantic reasoning e.g. ontology	Not
See REQ-2015-	reasoning or semantic rule-based reasoning.	implemented
0521R01		
RES-003	The oneM2M System shall be able to support adding and updating semantic	Not
See REQ-2015-	information based on semantic reasoning.	implemented
0521R01		

6.3.6 Data Analytics Requirements

Table 8: Data Analytics Requirements

Requirement ID	Description	Release
ANA-001	The oneM2M System shall be able to support capabilities (e.g. processing	Not
See REQ-2015-	function) for performing M2M data analytics based on semantic descriptions	implemented
0521R01	from M2M Applications and /or from the M2M System.	
ANA-002	The oneM2M System shall provide the capability of interpreting and applying	Not
See REQ-2015-	service logic (e.g. rules/policies of triggering operations upon other resources or	implemented
0521R01	attributes according to the change of the monitored resource) described with	
	semantic annotation and ontology.	
ANA-003	The oneM2M System shall support a standardized format for the rules/policies	Not
See REQ-2015-	used to define service logic.	implemented
0521R01		

6.4 Security Requirements

Table 9: Security Requirements

Requirement ID	Description	Release
SER-001	The oneM2M System shall incorporate protection against threats to its	Partially
	availability such as Denial of Service attacks.	Implemented
		in Rel-1
SER-002	The oneM2M System shall be able to ensure the Confidentiality of data.	Implemented in Rel-1
SER-003	The oneM2M System shall be able to ensure the Integrity of data.	
		Implemented in Rel-1
SER-004	In case where the M2M Devices support USIM/UICC and the Underlying	Implemented
	Networks support network layer security, the oneM2M System shall be able to	in Rel-1
	leverage device's USIM/UICC credentials and network's security capability e.g.	
	3GPP GBA for establishing the M2M Services and M2M Applications level	
SER-005	security through interfaces to Underlying Network. In case where the M2M Devices support USIM/UICC and the Underlying	Implemented
3LIX-003	Networks support network layer security, and when the oneM2M System is	in Rel-1
	aware of Underlying Network's bootstrapping capability e.g. 3GPP GBA, the	
	oneM2M System shall be able to expose this capability to M2M Services and	
	M2M Applications through API.	
SER-006	In case where the M2M Devices support USIM/UICC and the Underlying	Implemented
	Networks support network layer security, the oneM2M System shall be able to	in Rel-1
	leverage device's USIM/UICC Credentials when available to bootstrap M2M	
055.005	Security Association.	
SER-007	When some of the components of an M2M Solution are not available (e.g. WAN	Implemented
	connection lost), the oneM2M System shall be able to support the Confidentiality and the Integrity of data between authorized components of the	in Rel-1
	M2M Solution that are available.	
	priziri Johnin mat die avaliable.	

Requirement ID	Description	Release
SER-008	The oneM2M System shall support countermeasures against unauthorized access to M2M Services and M2M Application Services.	Implemented in Rel-1
SER-009	The oneM2M System shall be able to support Mutual Authentication for interaction with Underlying Networks, M2M Services and M2M Application Services.	Implemented in Rel-1
SER-010	The oneM2M System shall be able to support mechanisms for protection against misuse, cloning, substitution or theft of security credentials.	Implemented in Rel-1
SER-011	The oneM2M System shall protect the use of the identity of an M2M Stakeholder within the oneM2M System against discovery and misuse by other stakeholders.	Implemented in Rel-1
SER-012	The oneM2M System shall be able to support countermeasures against Impersonation attacks and replay attacks.	Partially implemented in Rel-1 (see note 3)
SER-013	The oneM2M System shall be able to provide the mechanism for integrity-checking on boot, periodically on run-time, and on software upgrades for software/hardware/firmware component(s) on M2M Device(s).	Not implemented
SER-014	The oneM2M System shall be able to provide configuration data to an authenticated and authorized M2M Application in the M2M Gateway/Device.	Implemented in Rel-1
SER-015	The oneM2M System shall be able to support mechanisms to provide M2M Service Subscriber identity to authorized and authenticated M2M Applications when the oneM2M System has the M2M Service Subscriber's consent.	Partially implemented (see note 4)
SER-016	The oneM2M System shall be able to support non repudiation within the M2M service layer and in its authorized interactions with the network and application layers.	Implemented in Rel-1
SER-017	The oneM2M System shall be able to mitigate threats identified in oneM2M TR-0008 [i.3].	Implemented in Rel-1
SER-018	The oneM2M System shall enable an M2M Stakeholder to use a resource or service and be accountable for that use without exposing its identity to other stakeholders.	Partially implemented
SER-019	The oneM2M System shall be able to use service-level Credentials present inside the M2M Device for establishing the M2M Services and M2M Applications level security.	Implemented in Rel-1
SER-020	The oneM2M System shall enable legitimate M2M Service Providers to provision their own Credentials into the M2M Devices/Gateways.	Implemented in Rel-1 (see note 5)
SER-021	The oneM2M System shall be able to remotely and securely provision M2M security Credentials in M2M Devices and/or M2M Gateways.	Implemented in Rel-1 (see note 5)
SER-022	The oneM2M System shall enable M2M Application Service Providers to authorize interactions involving their M2M Applications on supporting entities (e.g. Devices/ Gateways/ Service infrastructure).	Implemented in Rel-1
SER-023	Where a Hardware Security Module (HSM) is supported, the oneM2M System shall be able to rely on the HSM to provide local security.	Partially implemented
SER-024	The oneM2M System shall enable M2M Applications to use different and segregated security environments.	Partially implemented
SER-025	The oneM2M System shall be able to prevent unauthorized M2M Stakeholders from identifying and/or observing the actions of other M2M Stakeholders in the oneM2M System, e.g. access to resources and services (see note 1).	Implemented in Rel-1
SER-026	The oneM2M System shall be able to provide mechanism for the protection of Confidentiality of the geographical location information (see note 2).	Implemented in Rel-1
SER-027 See REQ-2015- 0558R01	The M2M System shall support grouping of M2M Applications that have the same access control rights towards one specific resources, together so that access control validation can be performed by validating if the M2M Application is a member of certain group.	Implemented in Rel-2
SER-028 See REQ-2015- 0568R04	The oneM2M System shall enable security protocol end-points to protect portions of individual application-generated data so that intermediate entities (whether trusted or untrusted) forwarding the data are unable to access the protected portions of the data in clear text.	Implemented in Rel-2
SER-029 See REQ-2015- 0568R04	The oneM2M System shall enable security protocol end-points to protect portions of individual application-generated data so that security protocol end-points can detect modification, including modification by intermediate service layer entities (whether trusted or untrusted) forwarding the data.	Implemented in Rel-2

Requirement ID	Description	Release
SER-030	The oneM2M System shall enable security protocol end-points to protect	Implemented
	portions of individual oneM2M messages so that intermediate entities (whether	in Rel-2
	trusted or untrusted) forwarding the messages are unable to access the	
055.004	protected portions of the messages in clear text.

See REQ-2015-	portions of individual oneM2M messages so that security protocol end-points	in Rel-2
0569R03	can detect modification, including modification by intermediate service layer	
SER-032	entities (whether trusted or untrusted) forwarding the messages. The oneM2M System shall enable security protocol end-points to establish	Implemented
See REQ-2015-	security sessions which are used for protecting portions of one or more	in Rel-2
0569R03	oneM2M messages so that intermediate entities (whether trusted or untrusted)	111111111111111111111111111111111111111
00001100	forwarding the messages are unable to access the protected portions of the	
	messages in clear text.	
SER-033	The oneM2M System shall enable security protocol end-points to establish	Implemented
See REQ-2015-	security sessions which are used for protecting portions of one or more	in Rel-2
0569R03	oneM2M messages so that security protocol end-points can detect modification,	
	including modification by intermediate service layer entities (whether trusted or	
	untrusted) forwarding the messages.	
SER-034	The oneM2M System shall enable security protocol end-points to protect	Partially
See REQ-2015-	portions of messages or data so that intermediate entities (whether trusted or	Implemented
0575R01	untrusted) forwarding the messages or data are unable to access the protected	
	portions of messages or data in clear text.	
SER-035	The oneM2M System shall enable security protocol end-points to protect	Partially
See REQ-2015-	portions of messages or data so that security protocol end-points can detect	Implemented
0575R01	modification, including modification by intermediate service layer entities	
	(whether trusted or untrusted) forwarding the messages or data.	
SER-036	The oneM2M System shall enable security protocol end-points to authenticate	Implemented
See REQ-2015-	each other without relying on intermediate service layer entities (whether	in Rel-2
0575R01	trusted or untrusted).	
SER-037	The oneM2M System shall be able to support distributed authorization functions	Partially
See SEC-2015-	for making access control decisions, providing Access Control Policies and	Implemented
0515R02	providing authorization attributes (e.g. roles).	
SER-038	The oneM2M System shall be able to expose an interoperable interface to	Not
See SEC-2015-	provide Access Control Policies by means of specified access control policy	implemented
0515R02	language.	
SER-039	The oneM2M System shall enable individuals to establish policies for controlling	Implemented
See SEC-2015- 0515R02	access to their personal identifiable information even when it may have been	in Rel-2
SER-040	collected without their knowledge. When the M2M Devices are grouped and the M2M Gateway is authorized as	Not
See SEC-2015-	the delegate of the group to access the M2M Server, the M2M Gateway shall	Implemented
0517R05	be able to, perform Mutual Authentication with the M2M Server, on behalf of the	Implemented
0317103	M2M Devices in the group.	
SER-041	When the M2M Devices are grouped and the M2M Gateway belongs to a third	Implemented
See SEC-2015-	party, oneM2M System shall be able to protect Security and Privacy of	in Rel-2
0517R05	communication between individual M2M Device and M2M Server from other	III TOI Z
00111100	M2M devices and the third party M2M Gateway.	
SER-042	A secured API shall enable application and service layer entities to make use of	Not
See SEC-2015-	sensitive functions and data residing within the Secure Environment,	Implemented
0522R02	independently of the technical implementation of the Secure Environment.	
SER-043	The oneM2M System shall enable authorizing a oneM2M entity to temporarily	Not
See REQ-2015-	delegate its access rights (or a subset thereof) to another authorized oneM2M	Implemented
0590R01	entity, wherein the dynamically delegated access rights shall not enable the	
	"delegated-to" oneM2M entity to delegate the same rights in turn to a third	
	oneM2M entity.	
SER-044	For M2M Application Service data, that are processed by an M2M Application B	Not
See REQ-2015-	in a M2M entity (e.g. M2M Gateway) on its path from an originator A to the	Implemented
0591R04	recipient M2M Application C, the oneM2M System shall provide means that	
	enable the recipient to verify both:	
	integrity of the data received by the M2M Application B from the	
	originator A;	
	and, at the same time:	
	that the M2M Application B that has processed the data has not been	
	compromised.	

Requirement ID	Description (1997)	Release
	The oneM2M System shall support classification of application data by M2M	Not
	applications into various security levels that are specified by oneM2M and	Implemented
	upport the mapping of these levels to applicable security capabilities.	
	The oneM2M System shall enable to protect portions of individual application	Implemented
	enerated data that is at-rest (e.g. hosted data) for integrity protection and data	in Rel-2
0605R04 cr	reator Authentication.

6.5 Charging Requirements

Table 10: Charging Requirements

service provider and software managed by an application provider. The entity managing a software

piece is designed as "allowed stakeholder" in the requirements above. Support for SIM is supported in Release 1 and Release 2.

Requirement ID	Description	Release
CHG-001	The oneM2M System shall support collection of charging specific information	Implemented
	related to the individual services facilitated by the oneM2M System (e.g. Data	in Rel-1
	Management, Device Management and/or Connectivity Management).	(see note 4)
	Collection of charging specific information shall be possible concurrent with the	
	resource usage. The format of the recorded information shall be fully specified	
	including mandatory and optional elements.	
CHG-002	The oneM2M System shall support mechanisms to facilitate correlation of	Partially
	charging information (e.g. of a User) collected for M2M Services, M2M	implemented
	Application Services and services provided by Underlying Network Operators.	(see note 2)
CHG-003	The oneM2M System shall provide means to coordinate charging data records	Not
	for data usages with differentiated QoS from the Underlying Network.	implemented
CHG-004	The oneM2M System shall be able to utilize existing charging mechanisms of	Not
	Underlying Networks.	implemented
		(see note 3)

Requirement ID	Description	Release
CHG-005	The oneM2M System shall support transfer of the charging information records	Implemented
	to the billing domain of the M2M Service Provider, for the purpose of:	in Rel-1
	subscriber billing;	
	inter-provider billing;	
	 provider-to-subscriber accounting including additional functions like 	
	statistics.	
CHG-006	The oneM2M System should support generation of charging events for the	Not
	purpose of requesting resource usage Authorization from the real time credit	implemented
	control system where the subscriber account is located. The information	
	contained in the charging events and the relevant chargeable events shall be	
	fully specified including mandatory and optional elements (see note 1).	
CHG-007	The oneM2M System shall support mechanisms to correlate charging	Rel-3/ future
See REQ-2017-	information (e.g. data/records) from different M2M Application Service	releases?
0031R05	Providers.	
NOTE 1: A chargeable event is any activity, a provider may want to charge for that utilizes the resources and		
related N	related M2M Services offered by such provider. A charging event is the set of charging information	

needed by the credit control system for resource authorization.

NOTE 2: Information collected can be sent to the Underlying Networks which may use it for charging.

NOTE 3: The oneM2M service layer can pass info to Underlying Networks but cannot use Underlying Network

mechanism. Charging can be done by Underlying Network. This is covered by CHG-002.

Only supported in the Infrastructure Node.

6.6 **Operational Requirements**

Table 11: Operational Requirements

Requirement ID	Description	Release
OPR-001	The oneM2M System shall provide the capability for monitoring and diagnostics	Implemented
	of M2M Applications.	in Rel-1
OPR-002	The oneM2M System shall provide the capability for software management of	Implemented
	M2M Applications.	in Rel-1
OPR-003	The oneM2M System shall be able to configure the execution state an M2M	Implemented
	Application (start, stop, restart).	in Rel-1
OPR-004	When suitable interfaces are provided by the Underlying Network, the oneM2M	Not
	System shall have the ability to schedule traffic via the Underlying Network	implemented
	based on instructions received from the Underlying Network.	
OPR-005	The oneM2M System shall be able to exchange information with M2M	Implemented
	Applications related to usage and traffic characteristics of M2M Devices or M2M	in Rel-2
	Gateways by the M2M Application. This should include support for the 3GPP	
	feature called: "Time controlled" (see note).	
OPR-006	Depending on availability of suitable interfaces provided by the Underlying	Implemented
	Network the oneM2M System shall be able to provide information related to	in Rel-2
	usage and traffic characteristics of M2M Devices or M2M Gateways to the	
	Underlying Network.	
OPR-007	The oneM2M System shall be able to support receipt of the status information	Not
See REQ-2015-	of the Underlying Network if supported by the Underlying Network.	implemented
0550R03		
OPR-008	The oneM2M System shall be able to provide the M2M Applications with status	Not
See REQ-2015-	information received from the Underlying Network.	implemented
0550R03		
OPR-009	The format for registered App-IDs shall be able to support use by people and	Implemented

	Implemented
application(s). The oneM2M system shall support the data to be transmitted from IoT platform.	Not
The oneM2M system shall support the data to be transmitted from IoT platform to subscribed devices with highest priority, with strict timing and packet loss	Not Implemented
<u> </u>	The oneM2M System shall provide to M2M Applications a communication service which provides buffering of messages to/from M2M Gateway/Device/Infrastructure Domain. The oneM2M System shall be able to support forwarding buffered messages depending on communication policies and based on service preference associated with the buffered messages. The oneM2M System shall enable an M2M Application to send a communication request with the following service preference: • QoS parameters, including delay tolerance, for initiating the delivery of data; • categorizing communication requests into different levels of priority or QoS classes. The oneM2M System shall be able to support concurrent processing of messages within M2M Gateways and/or M2M Devices from different sources with awareness for the service preference associated with the messages while observing the provisioned communication policies. The oneM2M System shall be able to maintain context associated with M2M sessions (e.g. security context or network connectivity context during the interruption of the session). The oneM2M System shall support the ability for applications to categorize requested communications (priority, importance, etc.), so that the oneM2M System shall support tonefigurable communication policies that will define its communication policies that information received from the Underlying Network (such as information referred to in OPR-004) as well as information received from the Applications (such as the information referred to in OPR-005 or categorization of communication policies when exchanging data between the M2M Gateway/Device/Infrastructure Domain. The oneM2M System shall support data aggregation based on communication policies when exchanging data between the M2M Gateway/Device/Infrastructure Domain. The oneM2M System shall support an additional randomized delay of communications, based on communication policies, when exchanging data between the M2M Gateway/Device/Infrastructure Domain. The oneM2M System shall be able to monitor

Requirement ID	Description	Release
CMR-0018	The oneM2M System shall be able to detect and report the missing data in time	Implemented
See REQ-2017-	Q-2017- series, for each source of time sensitive data which is sent to the IoT platform.	
0001R03		
CMR-0019	The oneM2M System shall be able to detect and report the missing data in time	Implemented
See REQ-2017-	series, for each time sensitive application receiving data.	in Rel-2
0001R03		
NOTE 1: Long lived security context and registration is covered, M2M Sessions are not covered.		
NOTE 2: CMDH policies (application side) is implemented, information from the Underlying Network can be		can be
utilized but the method for provisioning via Mcn is not covered.		

6.8 LWM2M Interworking Requirements

Table 13: LWM2M Interworking Requirements

0517R04	provided by the oneM2M System.	

7 Non-Functional Requirements (informative)

This clause is intended to gather high-level principles and guidelines that shall govern the design of the oneM2M System. Such principles and guidelines are fundamental to the design of the oneM2M System. But as they cannot necessarily be expressed as requirements per se, they shall be introduced and expressed in this clause.

Table 14: Non-Functional Requirements
