

ONEM2M TECHNICAL SPECIFICATION		
Document Number	TS-0002-V2.7.1	
Document Name:	Requirements	
Date:	2016-August-30	
Abstract:	The present document contains an informative functional role model and normative technical requirements for oneM2M.	

This Specification is provided for future development work within oneM2M only. The Partners accept no liability for any use of this Specification.

The present document has not been subject to any approval process by the oneM2M Partners Type 1. Published oneM2M specifications and reports for implementation should be obtained via the oneM2M Partners' Publications Offices.

#### About oneM2M

The purpose and goal of oneM2M is to develop technical specifications which address the need for a common M2M Service Layer that can be readily embedded within various hardware and software, and relied upon to connect the myriad of devices in the field with M2M application servers worldwide.

More information about one M2M may be found at: http://www.oneM2M.org

#### Copyright Notification

No part of this document may be reproduced, in an electronic retrieval system or otherwise, except as authorized by written permission.

The copyright and the foregoing restriction extend to reproduction in all media.

# 1 Scope

The present document contains an informative functional role model and normative technical requirements for one M2M.

## 2 References

#### 2.1 Normative references

References are either specific (identified by date of publication and/or edition number or version number) or non-specific. For specific references, only the cited version applies. For non-specific references, the latest version of the reference document (including any amendments) applies.

The following referenced documents are necessary for the application of the present document.

[1] 3GPP TS 22.368: "Service requirements for Machine-Type Communications (MTC); Stage 1".

#### 2.2 Informative references

References are either specific (identified by date of publication and/or edition number or version number) or non-specific. For specific references, only the cited version applies. For non-specific references, the latest version of the reference document (including any amendments) applies.

The following referenced documents are not necessary for the application of the present document but they assist the user with regard to a particular subject area.

[i.1] oneM2M Drafting Rules.

 $NOTE: \quad A vailable \ at \ http://www.onem2m.org/images/files/oneM2M-Drafting-Rules.pdf.$ 

[i.2] oneM2M TS-0011: "Common Terminology".

[i.3] oneM2M TR-0008: "Security Analysis".

## 3 Definitions and abbreviations

#### 3.1 Definitions

For the purposes of the present document, the terms and definitions given in one M2M TS-0011 [i.2] apply.

#### 3.2 Abbreviations

For the purposes of the present document, the following abbreviations apply:

AE Application Entity

API Application Program Interface

BBF BroadBand Forum
CHA Continua Health Alliance
CPU Central Processing Unit
DM Device Management

GBA Generic Bootstrapping Architecture

GSMA Global System for Mobile Communications Association

GW Gateway

HGI Home Gateway Initiative HSM Hardware Security Module IP Internet Protocol

MTC Machine Type Communications

OMA Open Mobile Alliance

OSR Overall System Requirements
OWL Web Ontology Language

QoS Quality of Service

RDF Resource Description Framework

SMS Short Message Service

UICC Universal Integrated Circuit Card
USIM UMTS Subscriber Identity Module
USSD Unstructured Supplementary Service Data

WAN Wide Area Network

WLAN Wireless Local Area Network

## 4 Conventions

The keywords "shall", "shall not", "should", "should not", "may", "need not" in the present document are to be interpreted as described in the oneM2M Drafting Rules [i.1].

NOTE: According to oneM2M Drafting Rules [i.1] in order to mandate a feature in the oneM2M System but allow freedom to the individual deployment whether to use it or not subsequently requirements are often formulated like:

- "The oneM2M System shall support a mechanism [function, capability...] to ..."; or
- "...<u>shall</u> **be able to** ...".

This does not mandate usage of the required feature in a M2M Solution.

# 5 Introduction to the M2M ecosystem

## 5.1 Functional roles description

Figure 1: Functional Roles in the M2M Ecosystem

- 1) The *User* (individual or company aka: end-user) fulfils all of the following criteria:
  - Uses an M2M solution.
- 2) The Application Service Provider fulfils all of the following criteria:
  - Provides an M2M Application Service.
  - Operates M2M Applications.
- 3) The M2M Service Provider fulfils all of the following criteria:
  - Provides M2M Services to Application Service Providers.
  - Operates M2M Common Services.
- 4) The Network Operator fulfils all of the following criteria:
  - Provides *Connectivity* and related services for *M2M Service Providers*.
  - Operates an *Underlying Network*. Such an Underlying Network could e.g. be a telecom network.

Any of the above functional roles may coincide with any of the other roles. These functional roles do not imply business roles or architectural assumptions.

# 6 Functional Requirements

# 6.1 Overall System Requirements

**Table 1: Overall System Requirements** 

Requirement ID	Description	Release
OSR-001	The oneM2M System shall allow communication between M2M Applications by	Implemented
	using multiple communication means based on IP access.	in Rel-1
OSR-002a	The oneM2M System shall support communication means that can	Implemented
	accommodate devices with constrained computing (e.g. small CPU, memory,	in Rel-1
	battery) or communication capabilities (e.g. 2G wireless modem, certain WLAN	
000 0001	node).	
OSR-002b	The oneM2M System shall support communication means that can	Implemented
	accommodate devices with rich computing capabilities (e.g. large CPU, memory) or communication (e.g. 3/4G wireless modem, wireline).	in Rel-1
OSR-003	The oneM2M System shall support the ability to maintain application-to-	Not
See REQ-2015-	application communication in coordination with an application session for those	implemented
0626R01	M2M Applications that require it.	Implemented
OSR-004	The oneM2M System shall support session-less application communications for	Implemented
	those M2M Applications that require it.	in Rel-1
OSR-005	The oneM2M System shall be able to expose the services offered by	Partially
	telecommunications networks to M2M Applications (e.g. SMS, USSD,	implemented
	localization, subscription configuration, authentication (e.g. Generic	(see note 9)
	Bootstrapping Architecture), etc.), subject to restriction based on Network	,
	Operator's policy.	
OSR-006	The oneM2M System shall be able to reuse the services offered by Underlying	Partially
	Networks to M2M Applications and/or M2M Services by means of open access	implemented
	models (e.g. OMA, GSMA OneAPI framework). Examples of available services	(see note 10)
	are:	
	IP Multimedia communications.	
	Messaging.	
	Location.	
	Charging and billing services.	
	Device information and profiles.	
	<ul> <li>Configuration and management of devices.</li> </ul>	
	Triggering, monitoring of devices.	
	Small data transmission.	
	Group management.	
000 007	(see note 1).	
OSR-007	The oneM2M System shall provide a mechanism for M2M Applications to	Implemented
	interact with the Applications and data/information managed by a different M2M	in Rel-1
OSR-008	Service Provider, subject to permissions as appropriate.  The oneM2M System shall provide the capability for M2M Applications to	Implemented
USK-006	communicate with an M2M Device (i.e. application in the device) without the	in Rel-1
	need for the M2M Applications to be aware of the network technology and the	(see note 11)
	specific communication protocol of the M2M Device.	(000 11010 11)
OSR-009	The oneM2M System shall support the ability for single or multiple M2M	Implemented
	Applications to interact with a single or multiple M2M Devices/Gateways	in Rel-1
	(application in the device/gateway) (see note 2).	
OSR-010	The oneM2M System shall support mechanisms for confirmed delivery of a	Implemented
	message to its addressee to those M2M Applications requesting reliable	in Rel-1
	delivery to dectect failure of message within a given time interval.	
OSR-011a	The oneM2M System shall be able to request different communication paths,	Implemented
	from the Underlying Network based on Underlying Network Operator and/or	in Rel-1
	M2M Service Provider policies, routing mechanisms for transmission failures.	(see note 12)
OSR-011b	The oneM2M System shall be able to request different communication paths	Not
000 515	from the Underlying Network based on request from M2M Applications.	implemented
OSR-012	The oneM2M System shall support communications between M2M Applications	Implemented
	and M2M Devices supporting M2M Services by means of continuous or non-	in Rel-1
	continuous connectivity.	

MZM Application and shall schedule the communication accordingly or request the Underlying Network to do it, based on policies criteria.  OSR-014 The oneMZM System shall be able to communicate with MZM Devices, behind an MZM Gateway that supports heterogeneous MZM Area Networks.  The oneMZM System shall be able to assist Underlying Networks that support different communication patterns including infrequent communications, small data transfer, transfer of large file and streamed communications, small data transfer, transfer of large file and streamed communications, small data transfer, transfer of large file and streamed communications of the availability of, and changes to, available MZM Application/management information on the MZM Device/Gateway, including changes to the MZM Application from the MZM Device/Gateway, including changes to the MZM Application from the MZM Communication on the MZM Device/Gateway, including changes to the MZM Application from the MZM Communication	Requirement ID	Description	Release
the Underlying Network to do it, based on policies criteria.  OSR-015 The oneMZM System shall be able to communicate with MZM Devices, behind an MZM Gateway that supports heterogeneous MZM Area Networks.  The oneMZM System shall be able to assist Underlying Networks that support different communication patterns including infrequent communications, small data transfer, transfer of large file and streamed communications, small data transfer, transfer of large file and streamed communications, small data transfer, transfer of large file and streamed communications.  OSR-016 The oneMZM System shall provide the capability to notify MZM Applications of the availability of, and changes to, available MZM Application/management information on the MZM Device/Gateway, including changes to the MZM Area Network.  OSR-017 The oneMZM System shall be able to offer access to different sets of MZM Services to MZM Application Providers. The minimum set of services are:  • Connectivity management.  • Device management (service level management).  • Application Data management.  In order to enable different deployment scenarios, these services shall be made available by the oneMZM System shall be able to offer MZM Services to MZM Devices of services.  OSR-018 The oneMZM System shall be able to offer MZM Services to MZM Devices or Services.  OSR-019 The oneMZM System shall support the capabilities for data repository (i.e. to collect/store) and for data transfer from one or more MZM Devices of MZM Gateways, MZM Services infrastructure, or MZM Application infrastructure; when triggered by schedule or event;  • The oneMZM System shall be able to support policies and their management regarding the aspects of storage and retrieval of data/information.  OSR-020 The oneMZM System shall be able to support policies and their management in Remark Services Subscriptions (see note 4).  OSR-021 The oneMZM System shall be able to identify the MZM Services to be used by MZM Service Subscriptions.  OSR-022 The oneMZM System shall be able to identi	OSR-013	The oneM2M System shall be aware of the delay tolerance acceptable by the	Implemented
OSR-014 The oneMZM System shall be able to communicate with MZM Devices, behind in An MZM Gateway that supports Neterogeneous MZM Area Networks.  OSR-015 The oneMZM System shall be able to assist Underlying Networks that support different communication patterns including infrequent communications, small data transfer, transfer of large file and streamed communications, small data transfer, transfer of large file and streamed communications, small data transfer, transfer of large file and streamed communications, small data transfer, transfer of large file and streamed communications, small data transfer, transfer of large file and streamed communications, small data transfer, transfer of large file and streamed communication.  OSR-016 The oneMZM System shall provide the capability to notify MZM Applications of the wallable MZM Application/management information on the MZM Device/Gateway, including changes to the MZM Area Network.  OSR-017 The oneMZM System shall be able to offer access to different sets of MZM Services to MZM Application Providers. The minimum set of services are:  • Connectivity management.  • Device management (service level management).  • Application Data management.  In order to enable different deployment scenarios, these services shall be made available by the oneMZM System, individually, as a subset or as a complete set of services.  OSR-018 The oneMZM System shall be able to offer MZM Services to MZM Devices or MZM Gateways, for delivery to one or more MZM Gateways, MZM Services or MZM Gateways, for delivery to one or more MZM Gateways, MZM Services infrastructure, or MZM Application Infrastructure;  • More of the orea of the MZM Application in Provide mechanisms to enable sharing of data among multiple MZM Applications.  OSR-021 The oneMZM System shall be able to support policies and their management regarding the aspects of storage and retrieval of data/information.  OSR-023 The oneMZM System shall be able to identify the MZM Services to be used by MZM Services Subscriptions.  OSR-02			in Rel-1
an MZM Cateway that supports heterogeneous MZM Area Networks. The oneMZM System shall be able to assist Underlying Networks that support different communication patterns including infrequent communications, small data transfer, transfer of large file and streamed communications, small data transfer, transfer of large file and streamed communications.  OSR-016 The oneMZM System shall provide the capability to notify MZM Applications of the availability of, and changes to, available MZM Application/management information on the MZM Device/Gateway, including changes to the MZM Area Network.  OSR-017 The oneMZM System shall be able to offer access to different sets of MZM Services to MZM Application Providers. The minimum set of services are:  • Connectivity management.  • Device management (service level management).  • Application Data management.  In order to enable different deployment scenarios, these services shall be made available by the oneMZM System shall be able to offer MZM Services to MZM Devices of services.  OSR-018 The oneMZM System shall support the capabilities for data repository (i.e. to collect/store) and for data transfer from one or more MZM Devices or MZM Gateways, for delivery to one or more MZM Gateways, MZM Services Infrastructure, or MZM Application Infrastructure, as illusted below:  • ne oneMZM System shall support the capabilities for data repository (i.e. to collect/store) and for data transfer from one or more MZM Devices, MZM Services Infrastructure, or MZM Applications, which was a colon initiated by schedule or event;  • ne oneMZM System shall be able to support policies and their management regarding he aspects of storage and retrieval of data/information.  OSR-020 The oneMZM System shall be able to provide mechanisms to enable sharing of data among multiple MZM Applications.  • The oneMZM System shall be able to identify the MZM Applications in Removed to the components of the MZM Solution that are available (e.g. WAN connection lost), the oneMZM System shall be able to identif	000 044		
OSR-015   The oneMZM System shall be able to assist Underlying Networks that support different communication patterns including infrequent communications, small data transfer, transfer of large file and streamed communications, small data transfer, transfer of large file and streamed communications of the availability of, and changes to, available MZM Application/management information on the MZM Device/Gateway, including changes to the MZM Area Network.    OSR-017	OSR-014		Implemented
different communication, patterns including infrequent communications, small data transfer, transfer of large file and streamed communication.  OSR-016  The oneMZM System shall provide the capability to notify MZM Applications of the availability of, and changes to, available MZM Application/management information on the MZM Device/Gateway, including changes to the MZM Application when the MZM Device Cateway, including changes to the MZM Application on the MZM Device Cateway, including changes to the MZM Application on the MZM Device Cateway, including changes to the MZM APP MZM Services to MZM MZM Services to MZM Application Providers. The minimum set of services are:  • Connectivity management.  • Device management (service level management).  • Application Data management.  In order to enable different deployment scenarios, these services shall be made available by the oneMZM System, individually, as a subset or as a complete set of services.  OSR-018  The oneMZM System shall be able to offer MZM Services to MZM Devices froaming across cellular Underlying Networks, subject to restriction based on Metwork Operator's policy (see note 3).  OSR-019  The oneMZM System shall be able to offer MZM Gateway, MZM Services Infrastructure, or MZM Application Infrastructure, in ways requested by the MZM Application Infrastructure, in ways requested by the MZM Application Infrastructure, in ways requested by the MZM Application Infrastructure, or MZM Application Infrastructure;  • when triggered by schedule or event;  • or specified data.  OSR-021  The oneMZM System shall be able to support policies and their management regarding the aspects of storage and retrieval of data/information.  OSR-022  The oneMZM System shall be able to support policies and their management regarding the aspects of storage and retrieval of data/information.  OSR-023  The oneMZM System shall be able to identify the MZM Services to be used by MZM Services Subscriptions in Remarks of the MZM Solution that are available.  OSR-025  The oneMZM System	000 045		in Rel-1
data transfer, transfer of large file and streamed communication.  OSR-016 The oneM2M System shall provide the capability to notify M2M Applications of the availability of, and changes to, availability of, and changes to, availability of, and changes to the M2M Application from the M2M Device/Gateway, including changes to the M2M Area Network.  OSR-017 The oneM2M System shall be able to offer access to different sets of M2M Services to M2M Application Providers. The minimum set of services are:  • Connectivity management.  • Device management (service level management).  • Application Data management.  In order to enable different deployment scenarios, these services shall be made available by the oneM2M System, individually, as a subset or as a complete set of services.  OSR-018 The oneM2M System shall be able to offer M2M Services to M2M Devices roaming across cellular Underlying Networks, subject to restriction based on Network Operator's policy (see note 3).  OSR-019 The oneM2M System shall support the capabilities for data repository (i.e. to collect/store) and for data transfer from one or more M2M Devices or M2M Application Infrastructure, or M2M Application Infrastructure, in ways requested by the M2M Application Infrastructure, or M2M M2M Services Infrastructure, or	USR-015		
OSR-016  The oneM2M System shall provide the capability to notify M2M Applications of the availability of, and changes to, available M2M Application/management information on the M2M Device/Gateway, including changes to the M2M Area Network.  OSR-017  The oneM2M System shall be able to offer access to different sets of M2M Application Providers. The minimum set of services are:  • Connectivity management.  • Device management.  • Device management (service level management).  • Application Data management.  In order to enable different deployment scenarios, these services shall be made available by the oneM2M System, individually, as a subset or as a complete set of services.  OSR-018  The oneM2M System shall be able to offer M2M Services to M2M Devices roaming across cellular Underlying Networks, subject to restriction based on Network Operator's policy (see note 3).  OSR-019  The oneM2M System shall support the capabilities for data repository (i.e. to collect/store) and for data transfer from one or more M2M Devices or M2M Application Infrastructure, or M2M Application Infrastructure; in ways requested by the M2M Application Infrastructure; when triggered by schedule or event;  • for specified data.  OSR-020  The oneM2M System shall be able to support policies and their management regarding the aspects of storage and retrieval of data/information.  OSR-021  The oneM2M System shall be able to support policies and their management regarding the aspects of storage and retrieval of data/information.  OSR-023  The oneM2M System shall be able to support the normal operation of components of the M2M Solution are not available (e.g. WAN connection lost), the oneM2M System shall be able to support the normal operation of components of the M2M Solution shall be able to water the normal operation of components of the M2M Solution shall be able to support the normal operation of components of the M2M Solution shall be able to support the normal operation of components of the M2M Solution are not available (e.g. WAN conn			implemented
the availability of, and changes to, available MZM Application/management information on the MZM Device/Gateway, including changes to the MZM AZM Area Network.  OSR-017 The oneMZM System shall be able to offer access to different sets of MZM Services to MZM Application Providers. The minimum set of services are:  • Connectivity management.  • Device management (service level management).  • Application Data management.  In order to enable different deployment scenarios, these services shall be made available by the oneMZM System, individually, as a subset or as a complete set of services.  OSR-018  The oneMZM System shall be able to offer MZM Services to MZM Devices roaming across cellular Underlying Networks, subject to restriction based on Network Operator's policy (see note 3).  OSR-019 The oneMZM System shall support the capabilities for data repository (i.e. to collect/store) and for data transfer from one or more MZM Devices or MZM Gateways, for delivery to one or more MZM Gateways, MZM Services Infrastructure, or MZM Application Infrastructure, in ways requested by the MZM Application Infrastructure, in WZM Application Infrastructure;  • when triggered by schedule or event;  • when triggered by schedule or event;  • for specified data.  OSR-020  OSR-021  The oneMZM System shall be able to support policies and their management regarding the aspects of storage and retrieval of data/information.  Implem in Respect of the components of a MZM Solution are not available (e.g. WAN) connection lost), the oneMZM System shall be able to provide mechanisms to enable sharing of data among multiple MZM Applications.  OSR-022  When some of the components of a MZM Solution are not available (e.g. WAN) connection lost), the oneMZM System shall be able to identify the MZM Services to be used by MZM Service Subscriptions (see note 4). Requirement ID	Description	Release
OSR-032	The oneM2M System shall be able to support Event Categories (e.g. normal, urgency) associated with data for M2M Applications when collecting, storing and reporting that data (see note 6).	Implemented in Rel-1
OSR-033	Based on the Dynamic Device/Gateway Context of the M2M Gateway and/or Device and the defined Event Categories, the oneM2M System shall provide the capability to dynamically adjust the scheduling of reporting and notification of the M2M Device/Gateway (see note 17).	Partially implemented (see note 15)
OSR-034	The oneM2M System shall support seamless replacement of M2M Devices as well as M2M Gateways (e.g. redirecting traffic, connection, recovery, etc.).	Not implemented
OSR-035	The oneM2M System shall support the exchange of non-M2M Application related relevant information (e.g. Device/Gateway classes) between M2M Device/Gateway and M2M Service Infrastructure for the purpose of efficient communication facilitation. This includes the capability for an M2M Device to report its device class to M2M Service Infrastructure and for the M2M Service Infrastructure to inform M2M Device of the M2M Service Infrastruture capabilities.	Not implemented
OSR-036	The oneM2M System should provide mechanisms to accept requests from M2M Application Service Providers for compute/analytics services.	Not implemented
OSR-037	The oneM2M System shall enable an M2M Application to request to send data, in a manner independent of the Underlying Network, to the M2M Applications of a group of M2M Devices and M2M Gateways in geographic areas that are specified by the M2M Application.	Not implemented
OSR-038	The oneM2M System shall support the inclusion of M2M Application's QoS preference in service requests to Underlying Networks.	Not implemented
OSR-039	The oneM2M System shall be able to authorize service requests with QoS preference at service level, but shall pass M2M Application's QoS preference in service requests to Underlying Network for authorization and granting or negotiation of the service QoS requests.	Not implemented
OSR-040	The oneM2M System shall be able to leverage multiple communication mechanisms (such as USSD or SMS) when available in the Underlying Networks.	Not implemented (see note 16)
OSR-041	The oneM2M System shall provide a mechanism, which supports the addition of new M2M Services to the oneM2M System as independent portable modules by means of the oneM2M interfaces.	Partially implemented (see note 21)
OSR-042	The oneM2M System shall be able to support different QoS-levels specifying parameters, such as guaranteed bitrate, delay, delay variation, loss ratio and error rate, etc.	Not implemented
OSR-043	The oneM2M System shall be able to verify that members of a group support a common set of functions.	Implemented in Rel-1
OSR-044	The oneM2M System shall support communication with M2M Devices which are reachable based on defined time schedules (e.g. periodic) as well as M2M Devices which are reachable in an unpredictable and spontaneous manner.	Implemented in Rel-1
OSR-045a	The oneM2M System shall be able to receive and utilize information provided by the Underlying Network about when an M2M Device can be reached.	Not implemented
OSR-045b	The oneM2M System shall be able to utilize reachability schedules generated by either the M2M Device or the Infrastructure Domain.	Partially implemented (see note 18)
OSR-046	The oneM2M System shall be able to support a capability for the M2M Application to request/disallow acknowledgement for its communication.	Not implemented
OSR-047	The oneM2M System shall be able to support mechanism for the M2M Devices and/or Gateways to report their geographical location information to M2M Applications (see note 7).	Implemented in Rel-1
OSR-048	The oneM2M System shall provide an M2M Service that allows M2M Devices and/or Gateways to share their own or other M2M Devices' geographical location information (see note 7).	Implemented in Rel-1
OSR-049	The oneM2M System shall be able to provide the capability for an M2M Application to selectively share data (e.g. access control) among applications.	Implemented in Rel-1
OSR-050	If communication over one communication channel provided by the Underlying Network can only be triggered by one side (Infrastructure Domain or Field Domain), and alternative channel(s) is (are) available in the other direction, the oneM2M System shall be able to use the alternative channel(s) to trigger bidirectional communication on the first channel.	Implemented in Rel-1
OSR-051	Depending on availability of suitable interfaces provided by the Underlying Network the oneM2M System shall be able to request the Underlying Network to broadcast/multicast data to a group of M2M Devices in a specified area.	Implemented in Rel-1

Requirement ID	Description	Release
OSR-052	The oneM2M System shall be able to select an appropriate Underlying Network	Not
	to broadcast or multicast data depending on the network's broadcast/multicast support and the connectivity supported by the targeted group of M2M Devices/Gateways.	implemented
OSR-053	The oneM2M System shall provide a means that enables backward	Not
O3K-033	compatibility of interfaces among different releases (see note 8).	implemented
OSR-054	The oneM2M System shall be able to support an M2M Application, M2M	Implemented
00.000	Device, or M2M Gateway to obtain access to resources of another M2M	in Rel-1
	Application, M2M Device, or M2M Gateway.	
OSR-055	The oneM2M System shall be able to provide the capability of M2M	Implemented
	Applications to exchange data with one or more authorized M2M Applications	in Rel-1
	which are not known in advance.	(see note 20
OSR-056	The oneM2M System shall enable discovery of usable M2M Applications on an	Implemented
	M2M Gateway or at an M2M Device .	in Rel-1
OSR-057	The oneM2M System shall enable discovery of M2M Gateways and M2M	Implemented
	Devices available to an M2M Application for data exchange.	in Rel-1
OSR-058	The oneM2M System shall be able to provide time stamps as needed by	Implemented
	Common Service Functions.	in Rel-1
OSR-059	The oneM2M System shall be able to support Role-Based Access Control	Implemented
000.000	based on M2M Service Subscriptions.	in Rel-1
OSR-060	The oneM2M System should support time synchronization with an external	Not
OSR-061	clock source.	implemented
USR-061	M2M Devices and M2M Gateways may support time synchronization within the	Not implemented
OSR-062	oneM2M System.  The oneM2M System shall enable means of testing the connectivity towards a	Not
USK-002	set of M2M Applications.	implemented
OSR-063	The oneM2M System shall be able to manage the scheduling of M2M Service	Implemented
OOIN-003	Layer connectivity and messaging between the Infrastracture Domain and M2M	in Rel-1
	Devices/Gateways.	III IXCI I
OSR-064	The oneM2M System shall be able to aggregate messages depending on	Implemented
	message delay tolerance and/or category.	in Rel-1
OSR-065	The oneM2M System shall provide mechanisms that enable a M2M Service	Not
	Provider to distribute processing functions to his M2M Devices/Gateways in the Field Domain	implemented
OSR-066	The oneM2M System shall be able to support the placement and operation of	Implemented
	M2M Applications in selected M2M Nodes per criteria requested by M2M	in Rel-1
000.007	Application Service Providers, subject to access rights.	
OSR-067	The oneM2M System shall be able to take operational and management action	Implemented
OCD 000	as requested by M2M Applications.	in Rel-1
OSR-068	When available from an Underlying Network, the oneM2M System shall be able to provide the capability to retrieve and report the information regarding whether	Not
	an M2M Device is authorized to access Underlying Network services.	implemented
OSR-069	When available from the Underlying Network, the oneM2M System shall be	Not
0311-009	able to maintain the M2M Service Operational Status of a M2M Device and	implemented
	update it when the Underlying Network connectivity service status changes.	Implemented
OSR-070	The oneM2M System shall be able to provide the capability to notify an	Partially
	authorized M2M Application when the M2M Service Administrative State or	implemented
	M2M Service Operational Status of an M2M Device changes, if that M2M	(see note 19
	Application has subscribed for such notifications.	
OSR-071	The oneM2M System shall be able to enable an authorized M2M Application to	Implemented
	set the M2M Service Administrative State of a M2M Device.	in Rel-1
OSR-072	The oneM2M System shall be able to initiate a set of well-defined actions	Not
	(e.g. trigger upon a threshold, compare a value, etc.) to one or more M2M	implemented
000.070	Application(s) on behalf of another M2M Application.	NI-4
OSR-073 See REQ-2015-	The oneM2M System shall support distributed transactions to multiple devices	Not
0529R03	or applications where the transaction includes the characteristics of atomicity, consistency, isolation and durability.	implemented
OSR-074	The oneM2M System shall support the completion of distributed transactions to	Not
See REQ-2015-	multiple devices or applications while maintaining the order of the operations	implemented
0529R03	and performing the transaction within a given time frame.	, implomented
OSR-75	The oneM2M System shall be able to collect, store Time Series Data.	Implemented
See REQ-2015-	The state of the s	in Rel-2
0546R01		
OSR-76	The oneM2M System shall be able to detect and report the missing data in time	Implemented
See REQ-2015-	series.	in Rel-2
0546R01		•

Requirement ID	Description	Release
OSR-077 See REQ-2015- 0558R01	The oneM2M System shall be capable of collecting asynchronous responses pertaining to the broadcasted messages.	Not implemented
OSR-078 See REQ-2015- 573R01	The oneM2M System shall support gateway-based capabilities for Event management, e.g. capability for arbitration of the resulting processing.	Not implemented
OSR-079 See REQ-2015- 574R01	The oneM2M System shall provide the capability to notify a device hosting a group of applications when alternative registration points for that group of applications are available (e.g. via different underlying networks) based on the service requirements of each of the applications hosted.	Not implemented
OSR-080 See REQ-2015- 574R01	The oneM2M System shall provide the capability to register applications in group or independently, based on their service requirements.	Not implemented
OSR-081 See REQ-2015- 0553R02	The oneM2M System shall be able to collect data that is broadcast (e.g. in industrial bus systems) according to data collection policies.	Not implemented
OSR-082 See REQ-2015- 0553R02	The oneM2M System shall allow the update, modification, or deletion of data collection policies within an M2M Application.	Not implemented
OSR-083 See REQ-2015- 0593R02	The oneM2M System shall be able to filter information from oneM2M Devices for a given set of parameters.	Not implemented
OSR-084 See REQ-2015- 0595R04	The oneM2M System shall be able to handle an event notification from an authorized M2M Application which triggers actions to be performed on the M2M Device (example: Turn on or off the monitoring).	Not implemented
OSR-085 See REQ-2015- 0608	The oneM2M System shall support resource caching of registered M2M Devices. Resource caching is a mechanism through which the oneM2M System retains resources of a registered M2M Device in temporarily inactive state by moving the resources to a temporary storage e.g. cache bin.	Not implemented
OSR-086 See REQ-2015- 0611R02	The oneM2M System shall enable M2M Gateways to discover M2M Infrastructure Nodes and M2M Devices available for data exchange.	Not implemented
OSR-087 See REQ-2015- 0611R02	The oneM2M System shall enable M2M Infrastructure Nodes and M2M Device to discover M2M Gateways available for data exchange.	Not implemented
OSR-088 See REQ-2015- 0611R02	The oneM2M System shall be able to support the capabilities for data repository (i.e. to collect/store) and for data transfer among authorized M2M Devices and M2M Gateways via M2M Area Networks without involvement of the Infrastructure Domain.	Not implemented
OSR-089 See REQ-2015- 0620	The oneM2M System shall enable the cancellation of continuous data collection and/or the deletion of collected data when pre-defined conditions are met.	Not implemented
OSR-090 See REQ-2015- 0622R02	The oneM2M System shall be able to forward the M2M Application Data to M2M Application without storing the Data.	Partially implementd (see note 22)
OSR-091 See REQ-2015- 0622R02	The oneM2M System shall be able to notify interested oneM2M entities when it detects forwarded M2M Application Data was not delivered within expected time duration.	Not implemented
OSR-092 See REQ-2015- 0629	The oneM2M System shall provide the capability for monitoring and describing data streams with associated attributes e.g. data freshness, accuracy, sampling rate, data integrity.	Not implemented
OSR-093 See REQ-2015- 0630	The oneM2M System shall support transaction management to multiple devices or applications providing policy based mechanism that should be invoked (e.g. keep status, re-schedule, rollback) depending on the outcome of the desired operation.	Not implemented
OSR-094 See REQ-2015- 0631R02	The oneM2M System shall provide Information Model(s) to support interoperability among different devices/applications.	Implemented in Rel-2
OSR-095 See REQ-2015- 0631R02	The oneM2M System should provide mappings between different Information Models from non-oneM2M System(s).	Not implemented
OSR-096 See REQ-2015- 0631R02	The oneM2M System should be able to interwork with non-oneM2M System(s).	Implemented in Rel-2

Requirement ID	Description	Release
OSR-097	The oneM2M System shall be able to share data collection policies among	Not
See REQ-2015-	multiple M2M Devices/Gateways within an M2M Application Service, or among	implemented
0583R01	different M2M Application Services.	
OSR-098	The oneM2M system shall be able to support machine socialization	Not
	functionalities (such as existence discovery, correlated task discovery,	implemented
0055R02	message interface discovery and process optimization for multiple machines	
	with same tasks).	

- NOTE 1: The set of features or APIs to be supported depends on the M2M Common Services and access to
- NOTE 2: The relation M2M Network Application to M2M Device/Gateway may be 1:1, 1:n, n:1 and/or n:m.
- NOTE 3: No roaming on M2M Service level is assumed by this requirement.
- NOTE 4: M2M Service Subscriptions are not Application subscriptions (e.g. Home Energy Management).
- NOTE 5: Transparent exchange of information implies information that is mainly interpreted by the M2M Application and the Underlying Network Provider.
- NOTE 6: Based on the Event Categories and via interworking with Underlying Networks, the oneM2M System can support differentiated services (by providing Quality-of-Service) requested by M2M Applications.
- NOTE 7: Geographical location information can be more than simply longitude, latitude and Geo-fence event.
- NOTE 8: "means" above does not imply only technical mechanisms, e.g. there is no protocol version negociation. NOTE 9: In Rel-1 only GBA and localization are available.
- NOTE 10: Rel-1 covers: Location, Charging and billing services, Configuration and management of devices, Device information and profiles, Triggering.
- NOTE 11: This requirement applies to M2M Devices but not to devices interworked via M2M Area Networks.
- NOTE 12: Based on device triggering.
- NOTE 13: No Support for streamed communication.
- NOTE 14: Limitations to trigger (via Tsp interface) devices in a roamed-to network.
- NOTE 15: Detail syntax to describe Dynamic Context is not specified.
- NOTE 16: It is possible to deliver CoAP over SMS, but currently SMS message delivery interfaces are not expicitely defined.
- NOTE 17: For example, if the battery of Gateway is remained only 10% or below, the Gateway notifies the M2M service platform of the status. The M2M Application in the Infrastructure node will adjust the scheduling of reporting and notification based on the Event Categories associated with each message. Consequently, the M2M Gateway operates longer.
- NOTE 18: Void.
- NOTE 19: Only the M2M Service Administrative State can be notified. M2M Service Operational Status is not implemented.
- NOTE 20: This can be implemented based on preconfigured access rights.
- NOTE 21: In Rel-1 this is supported by means of the Mca interfaces, mapping the new service module to an AE.
- NOTE 22: In Rel-2 data are stored in the CSE but never get retrieved by other entities except by subscribe/notify mechanism.

#### 6.2 Management Requirements

**Table 2: Management Requirements** 

Requirement ID	Description	Release
MGR-001	The oneM2M System shall be able to support management and configuration of	Implemented
	M2M Gateways/ Devices including resource constrained M2M Devices.	in Rel-1
MGR-002	The oneM2M System shall provide the capability to discover the M2M Area	Implemented
	Networks including information about devices on those networks and the	in Rel-1
	parameters (e.g. topology, protocol) of those networks.	
MGR-003	The oneM2M System shall be able to provide the capability to maintain and	Implemented
	describe the management Information Model of devices and parameters	in Rel-1
	(e.g. topology, protocol) of M2M Area Networks.	
MGR-004	The oneM2M System shall support common means to manage devices	Implemented
	enabled by different management technologies (e.g. OMA DM, BBF TR069).	in Rel-1
MGR-005	The oneM2M System shall provide the capability to manage multiple devices in	Implemented
	a grouped manner.	in Rel-1
MGR-006	The oneM2M System shall provide the capability for provisioning and	Implemented
	configuration of devices in M2M Area Networks.	in Rel-1
MGR-007	The oneM2M System shall provide the capability for monitoring and diagnostics	Implemented
	of M2M Gateways/Devices in M2M Area Networks.	in Rel-1
MGR-008	The oneM2M System shall provide the capability for software management of	Implemented
	devices in M2M Area Networks.	in Rel-1

Requirement ID	Description	Release	
MGR-009	The oneM2M System shall provide the capability for rebooting and/or resetting	Implemented	
	of M2M Gateways/Devices and other devices in M2M Area Networks.	in Rel-1	
MGR-010	The oneM2M System shall provide the capability for authorizing devices to	Implemented	
	access M2M Area Networks.	in Rel-1	
MGR-011	The oneM2M System shall provide the capability for modifying the topology of	Implemented	
	devices in M2M Area Networks, subject to restriction based on M2M Area	in Rel-1	
	Network policies.		
MGR-012	Upon detection of a new device the M2M Gateway shall be able to be	Partially	
	provisioned by the M2M Service Infrastructure with an appropriate configuration	implemented	
	which is required to handle the detected device.	(see note)	
MGR-013	Void.		
MGR-014	The oneM2M System shall be able to retrieve events and information logged by	Implemented	
	M2M Gateways/ Devices and other devices in M2M Area Networks.	in Rel-1	
MGR-015	The oneM2M System shall be able to support firmware management	Implemented	
	(e.g. update) of M2M Gateways/ Devices and other devices in M2M Area	in Rel-1	
	Networks.		
MGR-016	The oneM2M System shall be able to retrieve information related to the Static	Implemented	
	and Dynamic Device/Gateway Context for M2M Gateways/Devices as well as	in Rel-1	
	Device Context for other devices in M2M Area Networks.		
MGR-017	The oneM2M System shall be capable of correlating Access Management	Implemented	
	elements provided by the technology specific Device Management Protocols to	in Rel-1	
	Access Management elements used by the oneM2M System.		
MGR-018	The M2M Service Infrastructure shall be able to accept standardized	Not	
See REQ-2015-	configuration settings from an external configuration server to allow the M2M	implemented	
0555R02	Devices to register.		
MGR-019	The M2M Device shall be able to accept standardized configuration cettings	Not	
See REQ-2015-	from an external configuration server in order to register to the oneM2M	implemented	
0555R02	System.		
	,		
configured via the GW through DM.			

#### 6.3 Semantics Requirements

#### 6.3.1 **Ontology Related Requirements**

**Table 3: Ontology Requirements** 

Requirement ID	Description	Release
ONT-001 See REQ-2015- 0521R01	The M2M System shall support a standardized format for the rules/policies used to define service logic.	Not implemented
ONT-002 See REQ-2015- 0521R01	The M2M System shall support modelling semantic descriptions of Things (including relationships among them) by using ontologies.	Implemented in Rel-2
ONT-003 See REQ-2015- 0521R01	The M2M System shall support a common modeling language for ontologies (e.g. OWL).	Implemented in Rel-2
ONT-004 See REQ-2015- 0521R01	The M2M System should be able to provide translation capabilities from different modeling languages for ontologies to the language adopted by oneM2M if the expressiveness of the imported ontology allows.	Not implemented
ONT-005 See REQ-2015- 0521R01	The M2M System shall provide the capability to retrieve semantic descriptions and ontologies stored outside of the M2M System.	Not implemented
ONT-006 See REQ-2015- 0521R01	The M2M System shall provide support for linking ontologies defined in the context of the M2M System with ontologies defined outside this context.	Not implemented
ONT-007 See REQ-2015- 0521R01	The M2M System shall be able to support extending ontologies in the M2M System.	Not implemented
ONT-008 See REQ-2015- 0521R01	The M2M System shall be able to use ontologies that contain concepts representing aspects (e.g. a room) that are not represented by resources of the M2M System.	Implemented in Rel-2

Requirement ID	Description	Release
ONT-009 See REQ-2015- 0521R01	The M2M System shall be able to re-use common ontologies (e.g. location, time ontologies, etc.) which are commonly used in M2M Applications.	Not implemented
ONT-010 See REQ-2015- 0521R01	The M2M System shall be able to support simultaneous usage of multiple ontologies for the same M2M resource.	Implemented in Rel-2
ONT-011 See REQ-2015- 0521R01	The M2M System shall provide the capability for making ontology available in the M2M System, e.g. through announcement.	Not implemented
ONT-012 See REQ-2015- 0521R01	The M2M System shall be able to support mechanisms to import external ontologies into the M2M System.	Not implemented
ONT-013 See REQ-2015- 0521R01	The M2M System shall be able to support update of ontologies.	Not implemented
ONT-014 See REQ-2015- 0521R01	The M2M System shall enable functions for data conversion based on ontologies.	Not implemented
ONT-015 See REQ-2015- 0521R01	The M2M System shall be able to model devices based on ontologies which may be available outside the M2M System (e.g. HGI device template).	Implemented in Rel-2
ONT-016 See REQ-2015- 0521R01	The M2M System shall support storage, management and discovery of ontologies.	Not implemented
ONT-017 See REQ-2015- 0609	The oneM2M System shall support a semantic relation ("Is Paired To") between two M2M Devices.	Not implemented

#### 6.3.2 Semantics Annotation Requirements

**Table 4: Semantics Annotation Requirements** 

Requirement ID	Description	Release
ANN-001 See REQ-2015- 0521R01	The oneM2M System shall provide capabilities to manage semantic information about the oneM2M resources, e.g, create, retrieve, update, delete, associate/link.	Implemente d in Rel-2
ANN-002 See REQ-2015- 0521R01	The oneM2M System shall support a common language for semantic description, e.g. RDF.	Implemente d in Rel-2
ANN-003 See REQ-2015- 0521R01	The oneM2M System shall support semantic annotation of oneM2M resources for example application related data contained in containers.	Implemente d in Rel-2
ANN-004 See REQ-2015- 0521R01	The oneM2M System shall support semantic annotation based on related ontologies.	Implemente d in Rel-2
ANN-005 See REQ-2015- 0521R01	The oneM2M System shall provide the capability for making semantic descriptions available in the M2M System, e.g. announcement.	Implemente d in Rel-2
ANN-006 See REQ-2015- 0521R01	The oneM2M System shall enable applications to retrieve an ontology representation related to semantic information used in the M2M System.	Not implemented
ANN-007 See REQ-2015- 0521R01	The oneM2M system shall provide capabilities to manage data quality descriptions of resource.	Not implemented

## 6.3.3 Semantics Query Requirements

**Table 5: Semantics Query Requirements** 

Requirement ID	Description	Release
QRY-001	The oneM2M System shall provide capabilities to discover M2M Resources	Implemente
See REQ-2015-	based on semantic descriptions.	d in Rel-2
0521R01		

## 6.3.4 Semantics Mashup Requirements

**Table 6: Semantics Mashup Requirements** 

Requirement ID	Description	Release
MSH-001 See <u>REQ-2015-</u> <u>0521R01</u>	The oneM2M System shall provide the capability to host processing functions for mash-up.	Not implemented
MSH-002 See <u>REQ-2015-</u> <u>0521R01</u>	The oneM2M System shall enable M2M Applications to provide processing functions for mash-up.	Not implemented
MSH-003 See <u>REQ-2015-</u> 0521R01	The oneM2M System itself may provide pre-provisioned or dynamically created processing functions for mash-up.	Not implemented
MSH-004 See <u>REQ-2015-</u> 0521R01	The oneM2M System shall be able to create and execute mash-ups based on processing functions.	Not implemented
MSH-005 See <u>REQ-2015-</u> <u>0521R01</u>	The oneM2M System shall be able to expose mash-ups as resources e.g. virtual devices.	Not implemented

## 6.3.5 Semantics Reasoning Requirements

**Table 7: Semantics Reasoning Requirements** 

Requirement ID	Description	Release
RES-001 See <u>REQ-2015-</u> 0521R01	The oneM2M System shall be able to update ontologies as a result of the ontology reasoning.	Not implemented
RES-002 See <u>REQ-2015-</u> 0521R01	The oneM2M System shall be able to support semantic reasoning e.g. ontology reasoning or semantic rule-based reasoning.	Not implemented
RES-003 See <u>REQ-2015-</u> 0521R01	The oneM2M System shall be able to support adding and updating semantic information based on semantic reasoning.	Not implemented

## 6.3.6 Data Analytics Requirements

**Table 8: Data Analytics Requirements** 

Requirement ID	Description	Release
ANA-001	The oneM2M System shall be able to support capabilities (e.g. processing	Not
See REQ-2015-	function) for performing M2M data analytics based on semantic descriptions	implemented
0521R01	from M2M Applications and /or from the M2M System.	-
ANA-002	The oneM2M System shall provide the capability of interpreting and applying	Not
See REQ-2015-	service logic (e.g. rules/policies of triggering operations upon other resources or	implemented
0521R01	attributes according to the change of the monitored resource) described with	
	semantic annotation and ontology.	
ANA-003	The oneM2M System shall support a standardized format for the rules/policies	Not
See REQ-2015-	used to define service logic.	implemented
0521R01	used to define service logic.	

#### Security Requirements 6.4

**Table 9: Security Requirements** 

Requirement ID	Description	Release
SER-001	The oneM2M System shall incorporate protection against threats to its availability such as Denial of Service attacks.	Partially Implemented in Rel-1
SER-002	The oneM2M System shall be able to ensure the Confidentiality of data.	Implemented in Rel-1
SER-003	The oneM2M System shall be able to ensure the Integrity of data.	Implemented in Rel-1
SER-004	In case where the M2M Devices support USIM/UICC and the Underlying Networks support network layer security, the oneM2M System shall be able to leverage device's USIM/UICC credentials and network's security capability e.g. 3GPP GBA for establishing the M2M Services and M2M Applications level security through interfaces to Underlying Network.	Implemented in Rel-1
SER-005	In case where the M2M Devices support USIM/UICC and the Underlying Networks support network layer security, and when the oneM2M System is aware of Underlying Network's bootstrapping capability e.g. 3GPP GBA, the oneM2M System shall be able to expose this capability to M2M Services and M2M Applications through API.	Implemented in Rel-1
SER-006	In case where the M2M Devices support USIM/UICC and the Underlying Networks support network layer security, the oneM2M System shall be able to leverage device's USIM/UICC Credentials when available to bootstrap M2M Security Association.	Implemented in Rel-1
SER-007	When some of the components of an M2M Solution are not available (e.g. WAN connection lost), the oneM2M System shall be able to support the Confidentiality and the Integrity of data between authorized components of the M2M Solution that are available.	Implemented in Rel-1
SER-008	The oneM2M System shall support countermeasures against unauthorized access to M2M Services and M2M Application Services.	Implemented in Rel-1
SER-009	The oneM2M System shall be able to support Mutual Authentication for interaction with Underlying Networks, M2M Services and M2M Application Services.	Implemented in Rel-1
SER-010	The oneM2M System shall be able to support mechanisms for protection against misuse, cloning, substitution or theft of security credentials.	Implemented in Rel-1
SER-011	The oneM2M System shall protect the use of the identity of an M2M Stakeholder within the oneM2M System against discovery and misuse by other stakeholders.	Implemented in Rel-1
SER-012	The oneM2M System shall be able to support countermeasures against Impersonation attacks and replay attacks.	Partially implemented in Rel-1 (see note 3)
SER-013	The oneM2M System shall be able to provide the mechanism for integrity-checking on boot, periodically on run-time, and on software upgrades for software/hardware/firmware component(s) on M2M Device(s).	Not implemented
SER-014	The oneM2M System shall be able to provide configuration data to an authenticated and authorized M2M Application in the M2M Gateway/Device.	Implemented in Rel-1
SER-015	The oneM2M System shall be able to support mechanisms to provide M2M Service Subscriber identity to authorized and authenticated M2M Applications when the oneM2M System has the M2M Service Subscriber's consent.	Partially implemented (see note 4)
SER-016	The oneM2M System shall be able to support non repudiation within the M2M service layer and in its authorized interactions with the network and application layers.	Implemented in Rel-1
SER-017	The oneM2M System shall be able to mitigate threats identified in oneM2M TR-0008 [i.3].	Implemented in Rel-1
SER-018	The oneM2M System shall enable an M2M Stakeholder to use a resource or service and be accountable for that use without exposing its identity to other stakeholders.	Partially implemented
SER-019	The oneM2M System shall be able to use service-level Credentials present inside the M2M Device for establishing the M2M Services and M2M Applications level security.	Implemented in Rel-1

Requirement ID	Description Part of the Part o	Release
SER-020	The oneM2M System shall enable legitimate M2M Service Providers to	Implemented
	provision their own Credentials into the M2M Devices/Gateways.	in Rel-1
OFD 004	TI MOMO ( IN	(see note 5)
SER-021	The oneM2M System shall be able to remotely and securely provision M2M	Implemented
	security Credentials in M2M Devices and/or M2M Gateways.	in Rel-1
SER-022	The oneM2M System shall enable M2M Application Service Providers to	(see note 5) Implemented
3EK-022	authorize interactions involving their M2M Applications on supporting entities	in Rel-1
	(e.g. Devices/ Gateways/ Service infrastructure).	III IXEI- I
SER-023	Where a Hardware Security Module (HSM) is supported, the oneM2M System	Partially
02.1.020	shall be able torely onthe HSM to provide local security.	implemented
SER-024	The oneM2M System shall enable M2M Applications to use different and	Partially
	segregated security environments.	implemented
SER-025	The oneM2M System shall be able to prevent unauthorized M2M Stakeholders	Implemented
	from identifying and/or observing the actions of other M2M Stakeholders in the	in Rel-1
	oneM2M System, e.g. access to resources and services (see note 1).	
SER-026	The oneM2M System shall be able to provide mechanism for the protection of	Implemented
	Confidentiality of the geographical location information (see note 2).	in Rel-1
SER-027	The M2M System shall support grouping of M2M Applications that have the	Implemented
See REQ-2015-	same access control rights towards one specific resources, together so that	in Rel-2
0558R01	access control validation can be performed by validating if the M2M Application	
OFD 000	is a member of certain group.	
SER-028	The oneM2M System shall enable security protocol end-points to protect	Implemented
See REQ-2015- 0568R04	portions of individual application-generated data so that intermediate entities (whether trusted or untrusted) forwarding the data are unable to access the	in Rel-2
0300104	protected portions of the data in clear text.	
SER-029	The oneM2M System shall enable security protocol end-points to protect	Implemented
See REQ-2015-	portions of individual application-generated data so that security protocol end-	in Rel-2
0568R04	points can detect modification, including modification by intermediate service	III TOOL 2
0000.10	layer entities (whether trusted or untrusted) forwarding the data.	
SER-030	The oneM2M System shall enable security protocol end-points to protect	Implemented
	portions of individual oneM2M messages so that intermediate entities (whether	in Rel-2
	trusted or untrusted) forwarding the messages are unable to access the	
	protected portions of the messages in clear text.	
SER-031	The oneM2M System shall enable security protocol end-points to protect	Implemented
See REQ-2015-	portions of individual oneM2M messages so that security protocol end-points	in Rel-2
0569R03	can detect modification, including modification by intermediate service layer	
	entities (whether trusted or untrusted) forwarding the messages.	
SER-032	The oneM2M System shall enable security protocol end-points to establish	Implemented
See REQ-2015-	security sessions which are used for protecting portions of one or more	in Rel-2
0569R03	oneM2M messages so that intermediate entities (whether trusted or untrusted) forwarding the messages are unable to access the protected portions of the	
	messages in clear text.	
SER-033	The oneM2M System shall enable security protocol end-points to establish	Implemented
See REQ-2015-	security sessions which are used for protecting portions of one or more	in Rel-2
0569R03	oneM2M messages so that security protocol end-points can detect modification,	
	including modification by intermediate service layer entities (whether trusted or	
	untrusted) forwarding the messages.	
SER-034	The oneM2M System shall enable security protocol end-points to protect	Partially
See REQ-2015-	portions of messages or data so that intermediate entities (whether trusted or	Implemented
0575R01	untrusted) forwarding the messages or data are unable to access the protected	
	portions of messages or data in clear text.	
SER-035	The oneM2M System shall enable security protocol end-points to protect	Partially
See REQ-2015-	portions of messages or data so that security protocol end-points can detect	Implemented
0575R01	modification, including modification by intermediate service layer entities	
	(whether trusted or untrusted) forwarding the messages or data.	Implemented

SER-036 See REQ-2015- 0575R01 SER-037 See SEC-2015-	(whether trusted or untrusted) forwarding the messages or data.  The oneM2M System shall enable security protocol end-points to authenticate each other without relying on intermediate service layer entities (whether trusted or untrusted).  The oneM2M System shall be able to support distributed authorization functions for making access control decisions, providing Access Control Policies and	in Rel-2 Partially

Requirement ID	Description	Release
SER-039	The oneM2M System shall enable individuals to establish policies for controlling	Implemented
See SEC-2015-	access to their personal identifiable information even when it may have been	in Rel-2
0515R02	collected without their knowledge.	
SER-040	When the M2M Devices are grouped and the M2M Gateway is authorized as	Not
See SEC-2015-	delegate of the group for accessing the M2M Server, the M2M Gateway shall	Implemented
0517R05	be able to, on behalf of the M2M Devices in the group, perform Mutual	
	Authentication with the M2M Server.	
SER-041	When the M2M Devices are grouped and the M2M Gateway belongs to a third	Implemented
See SEC-2015-	party, oneM2M System shall be able to protect Security and Privacy of	in Rel-2
0517R05	communication between individual M2M Device and M2M Server from other	
	M2M devices and the third party M2M Gateway.	
SER-042	A secured API shall enable application and service layer entities to make use of	Not
See SEC-2015-	sensitive functions and data residing within the Secure Environment,	Implemented
0522R02	independently of the technical implementation of the Secure Environment.	
SER-043	The oneM2M System shall enable authorizing a oneM2M entity to temporarily	Not
See REQ-2015-	delegate its access rights (or a subset thereof) to another authorized oneM2M	Implemented
0590R01	entity, wherein the dynamically delegated access rights shall not enable the	-
	"delegated-to" oneM2M entity to delegate the same rights in turn to a third	
	oneM2M entity.	
SER-044	For M2M Application Service data, that are processed by an M2M Application B	Not
See REQ-2015-	in a M2M entity (e.g. M2M Gateway) on its path from an originator A to the	Implemented
0591R04	recipient M2M Application C, the oneM2M System shall provide means that	
	enable the recipient to verify both:	
	integrity of the data received by the M2M Application B from the	
	originator A;	
	and, at the same time:	
	that the M2M Application B that has processed the data has not been	
	compromised.	
SER-045	The oneM2M System shall support classification of application data by M2M	Not
See REQ-2015-	Applications into various security levels that are specified by oneM2M and	Implemented
0604R02	support the mapping of these levels to applicable security capabilities.	Implemented
SER-046	The oneM2M System shall enable to protect portions of individual application	Implemented
See REQ-2015-	generated data that is at-rest (e.g. hosted data) for integrity protection and data	in Rel-2
0605R04	creator Authentication.	11111012
SER-047	The oneM2M System shall enable to protect portions of individual application	Implemented
See REQ-2015-	data at-rest (e.g. hosted data) for confidentiality protection.	in Rel-2
0605R04	data at 100t (0.g. 1100tod data) for obtilideritality protobilori.	11111012
SER-048	The oneM2M System shall ensure that the end-to-end data Credentials are	Implemented
See REQ-2015-	protected for Confidentiality, integrity and against tampering.	in Rel-2
0605R04	protected for Confidentiality, integrity and against tamporing.	III IXCI Z
SER-049	The oneM2M System shall ensure that the end-to-end data Credentials are	Implemented
See REQ-2015-	protected from exposure to intermediate entities.	in Rel-2
0605R04	protected from exposure to intermediate entitles.	1111161-2
SER-050	The oneM2M System shall enable pre-defined conditions to be protected from	Implemented
	unauthorized modification.	·
See REQ-2015-	unaumonzeu moumoalion.	in Rel-2
0620 SER-051	The analysis System shall enable the deletion of MOM data produced/stared by	Implemented
See REQ-2015-	The oneM2M System shall enable the deletion of M2M data produced/stored by	Implemented
0620	the M2M Devices/Gateways based on request from an authorized entity.	in Rel-2
SER-052	The oneM2M System shall store and process privacy preferences in an	Implemented
See REQ-2015-	interoperable manner.	Implemented in Rel-2
	interoperable manner.	III Kel-Z
0621R01	The oneM2M System shall support privacy profiles at various levels to care for	Implemented
SER-053		Implemented
See REQ-2015-	conditions of legal requirements, manufacturers, and data subjects.	in Rel-2

SER-054	The oneM2M System shall be able to prioritize privacy profiles where there is a	Implemented
See REQ-2015-	conflict between profiles (legal profile takes priority over data subject profile, for	in Rel-2
0621R01	example).	NI. 1
SER-055	The oneM2M System shall be able to support configuration of security related	Not
See REQ-2015-	settings of its infrastructure side components by a privileged user through	implemented
	- t - u - d - u - d' d   A   D	
0623R01	standardized API.	NI 1
0623R01 SER-056	The oneM2M System shall allow overriding of security settings by a privileged	Not
0623R01		Not implemented

Requirement ID	Description	Release
SER-057	The oneM2M System shall support a mechanism enabling addition/deletion of	Not
See REQ-2015- 0623R01	information enabling authentication of oneM2M entities through standardized API.	implemented
SER-058	The oneM2M System shall enable delegation of security functions (e.g.	Implemented
See REQ-2015- 0627R02	message authentication/integrity protection) of an entity to a trust-worthy entity.	in Rel-2
SER-059	The oneM2M System shall protect the authenticity, Integrity, and Confidentiality	Implemented
See REQ-2015- 0628R01	of the representation of the delegated access rights.	in Rel-2
SER-060	The oneM2M System shall be able to revoke the representation of the	Implemented
See REQ-2015-	delegated access rights.	in Rel-2
0628R01		
SER-061	The oneM2M System shall be able to verify the App-ID to support the detection	Not
See 0585R01-	of impersonation or to support revocation.	implemented
App-ID		
Requirements		
SER-062	The oneM2M system shall be able to reuse the privacy policy of the underlying	Not
See REQ-2016-	network.	implemented
0056R01		
SER-063	The oneM2M system shall be able to share its privacy policy with the underlying	Not
See REQ-2016-	network.	implemented
0056R01		
NOTE 1: The abo	we requirement does not cover items outside of the oneM2M System, e.g. Underly	ing Networks

NOTE 1: The above requirement does not cover items outside of the oneM2M System, e.g. Underlying Networks. NOTE 2: Geographical location information can be more than simply longitude and latitude.

NOTE 3: Partly supported for Impersonation attacks not supported for Replay attacks.

NOTE 4: The oneM2M System has no means to verify a subscriber's consent. This requirement is only fulfillable at application level.

NOTE 5: Regarding remote provisioning, Release 1 supports remote provisioning of symmetric key credentials only.

#### 6.5 Charging Requirements

**Table 10: Charging Requirements** 

Requirement ID	Description	Release
CHG-001	The oneM2M System shall support collection of charging specific information related to the individual services facilitated by the oneM2M System (e.g. Data Management, Device Management and/or Connectivity Management). Collection of charging specific information shall be possible concurrent with the resource usage. The format of the recorded information shall be fully specified including mandatory and optional elements.	Implemented in Rel-1 (see note 4)
CHG-002	The oneM2M System shall support mechanisms to facilitate correlation of charging information (e.g. of a User) collected for M2M Services, M2M Application Services and services provided by Underlying Network Operators.	Partially implemented (see note 2)
CHG-003	The oneM2M System shall provide means to coordinate charging data records for data usages with differentiated QoS from the Underlying Network.	Not implemented
CHG-004	The oneM2M System shall be able to utilize existing charging mechanisms of Underlying Networks.	Not implemented (see note 3)
CHG-005	The oneM2M System shall support transfer of the charging information records to the billing domain of the M2M Service Provider, for the purpose of:  • subscriber billing;  • inter-provider billing;  • provider-to-subscriber accounting including additional functions like statistics.	Implemented in Rel-1
CHG-006	The oneM2M System should support generation of charging events for the purpose of requesting resource usage Authorization from the real time credit control system where the subscriber account is located. The information contained in the charging events and the relevant chargeable events shall be fully specified including mandatory and optional elements (see note 1).	Not implemented

Requirer	nent ID	Description	Release
NOTE1:	A charge	able event is any activity, a provider may want to charge for that utilizes the resou	rces and
		12M Services offered by such provider. A charging event is the set of charging info	rmation
	needed b	by the credit control system for resource authorization.	
NOTE 2:	Informati	on collected can be sent to the Underlying Networks which may used it for chargin	g.
NOTE 3:	The one!	M2M service layer can pass info to Underlying Networks but cannot use Underlying	g Network
	mechanis	sm. Charging can be done by Underlying Network. This is covered by CHG-002.	
NOTE 4:	Only sup	ported in the Infrastructure Node.	

# 6.6 Operational Requirements

**Table 11: Charging Requirements** 

Requirement ID	Description	Release	
OPR-001	The oneM2M System shall provide the capability for monitoring and diagnostics of M2M Applications.	Implemented in Rel-1	
OPR-002	The oneM2M System shall provide the capability for software management of M2M Applications.	Implemented in Rel-1	
OPR-003	The oneM2M System shall be able to configure the execution state an M2M Application (start, stop, restart).	Implemented in Rel-1	
OPR-004	When suitable interfaces are provided by the Underlying Network, the oneM2M System shall have the ability to schedule traffic via the Underlying Network based on instructions received from the Underlying Network.	Not implemented	
OPR-005	The oneM2M System shall be able to exchange information with M2M Applications related to usage and traffic characteristics of M2M Devices or M2M Gateways by the M2M Application. This should include support for the 3GPP feature called: "Time controlled" (see note).	Implemented in Rel-2	
OPR-006	Depending on availability of suitable interfaces provided by the Underlying Network the oneM2M System shall be able to provide information related to usage and traffic characteristics of M2M Devices or M2M Gateways to the Underlying Network.	Implemented in Rel-2	
OPR-007 See REQ-2015- 0550R03	The oneM2M System shall be able to support receipt of the status information of the Underlying Network if supported by the Underlying Network.	Not implemented	
OPR-008 See REQ-2015- 0550R03	The oneM2M System shall be able to provide the M2M Applications with status information received from the Underlying Network.	Not implemented	
OPR-009 See 0585R01- App-ID Requirements	The format for registered App-IDs shall be able to support use by people and systems to readily determine whether the App-ID is registered and the Registration Authority which issued the App-ID, App Developer and App Name.	Implemented in Rel-2	
OPR-010 See 0585R01- App-ID Requirements	The oneM2M System Registration Authorities shall be able to collect and maintain supporting required information when assigning an App-ID.	Implemented in Rel-2	
NOTE: "Time controlled" is equivalent to the MTC Features specified in clause 7.2 of 3GPP TS 22.368 [1].			

# 6.7 Communication Management Requirements

**Table 12: Communication Management Requirements** 

Requirement ID	Description	Release
CMR-001	The oneM2M System shall provide to M2M Applications a communication service which provides buffering of messages to/from M2M Gateway/Device/Infrastructure Domain.	Implemented in Rel-1
CMR-002	The oneM2M System shall be able to support forwarding buffered messages depending on communication policies and based on service preference associated with the buffered messages.	Implemented in Rel-1

Requirement ID	Description	
CMR-003	The oneM2M System shall enable an M2M Application to send a	Implemented
	communication request with the following service preference:	in Rel-1
	<ul> <li>QoS parameters, including delay tolerance, for initiating the delivery of</li> </ul>	
	data;	
	<ul> <li>categorizing communication requests into different levels of priority or</li> </ul>	
	QoS classes.	
CMR-004	The oneM2M System shall be able to support concurrent processing of	Implemented
	messages within M2M Gateways and/or M2M Devices from different sources	in Rel-1
	with awareness for the service preference associated with the messages while	
	observing the provisioned communication policies.	
CMR-005	The oneM2M System shall be able to maintain context associated with M2M	Partially
	sessions (e.g. security context or network connectivity context during the	implemented
	interruption of the session).	(see note 1)
CMR-006	The oneM2M System shall support the ability for applications to categorize	Implemented
See REQ-2015-	requested communications (priority, importance, etc.), so that the oneM2M	in Rel-1
0564R02	System can adapt its actual communications (scheduling, aggregation,	
	compression, etc.) by taking this categorization into account.	
CMR-007	The oneM2M System shall support configurable communication policies that	Partially
See REQ-2015-	will define its communication patterns. Such policies shall take into account	Implemented
0564R02	information received from the Underlying Network (such as information referred	(see note 2)
	to in OPR-004) as well as information received from the Applications (such as	
	the information referred to in OPR-005 or categorization of communications	
OMD 000	requested by the applications).	 
CMR-008	The oneM2M System shall support data aggregation based on communication	Implemented
See REQ-2015-	policies when exchanging data between the M2M	in Rel-1
0564R02	Gateway/Device/Infrastructure Domain.	Not
CMR-009 See REQ-2015-	The oneM2M System should support data compression based on communication policies when exchanging data between the M2M	Not Implemented
0564R02	Gateway/Device/Infrastructure Domain.	implemented
CMR-010	The oneM2M System shall support an additional randomized delay of	Implemented

0564R02	between the M2M Gateway/Device/Infrastructure Domain.	111111111111111111111111111111111111111
CMR-011	The oneM2M System shall be able to monitor its own usage of the Underlying	Implemented
See REQ-2015-	Networks over given periods of time: attempted communications, failed	in Rel-2
0564R02	attempts and successful attempts.	III IXOI Z
CMR-012	The oneM2M System shall be able to restrict its own usage of the Underlying	Implemented
See REQ-2015-	Networks, based on communication policies and on its monitored usage of	in Rel-2
0564R02	them, when exchanging data between the M2M Gateway/Device/Infrastructure	
	Domain.	
CMR-013	The oneM2M System shall be able to refrain from using its own usage of the	Implemented
See REQ-2015-	Underlying Networks, based on a time-based back-off procedure configurable	in Rel-2
0564R02	in communication policies, when exchanging data between the M2M	
	Gateway/Device/Infrastructure Domain.	
CMR-014	The oneM2M System shall be able to restrict its own usage of the Underlying	Implemented
See REQ-2015-	Networks, based on communication policies and on the date and time, when	in Rel-1
0564R02	exchanging data between the M2M Gateway/Device/Infrastructure Domain.	
	The oneM2M System shall be able to identify a series of data (e.g. Time Series	Implemented
CMR-015	The chemical cyclem chair be able to identify a conce of data (e.g. Time conce	mpiomontoa
See REQ-2015-	Data) and indicate individual data belonging to this series.	in Rel-2

NOTE 1: Long lived security context and registration is covered, M2M Sessions are not covered.

NOTE 2: CMDH policies (application side) is implemented, information from the Underlying Network can be utilized but the method for provisioning via Mcn is not covered.

## 6.8 LWM2M Interworking Requirements

**Table 13: LWM2M Interworking Requirements** 

Requirement ID	Description	Release	
LWM2M-001	The oneM2M System shall provide the capability to transparently transport	Implemented	
See REQ-2015-	LWM2M Objects between LWM2M Clients and M2M Applications.	in Rel-2	
0517R04			
LWM2M-002	The oneM2M System shall provide the capability to translate LWM2M Objects	Implemented	
See REQ-2015-	into a semantic representation of the LWM2M Object as oneM2M resources.	in Rel-2	
0517R04			
LWM2M-003	The oneM2M System shall provide the capabilities of the LWM2M Server in	Implemented	
See REQ-2015-	order to interwork between LWM2M Clients and M2M Applications.	in Rel-2	
0517R04			
LWM2M-004	The oneM2M System shall provide the capability for M2M Applications to	Implemented	
See REQ-2015-	discover LWM2M Clients using the LWM2M Client's Endpoint Name.	in Rel-2	
0517R04			
LWM2M-005	When transparently transporting LWM2M Objects, the oneM2M System shall	Not	
See REQ-2015-	provide the capability for M2M Applications to discover the definion of LWM2M	implemented	
0517R04	Objects transported by the oneM2M System.		
LWM2M-006	When interworking with LWM2M Objects, the oneM2M System shall provide the	Implemented	
See REQ-2015-	capability for M2M Applications to discover a LWM2M Object using the LWM2M	in Rel-2	
0517R04	Object's identifier.		
LWM2M-007	The oneM2M System shall provide capability to onboard devices that	Implemented	
See REQ-2015-	incorporate a LWM2M Client.	in Rel-2	
0517R04			
LWM2M-008	The oneM2M System shall provide the capability to interoperate the underlying	Implemented	
See REQ-2015-	security mechanisms of the LWM2M Client with the security capabililities	in Rel-2	
0517R04	provided by the oneM2M System.		

# 7 Non-Functional Requirements (informative)

This clause is intended to gather high-level principles and guidelines that shall govern the design of the oneM2M System. Such principles and guidelines are fundamental to the design of the oneM2M System. But as they cannot necessarily be expressed as requirements per se, they shall be introduced and expressed in this clause.

**Table 14: Non-Functional Requirements** 

Requirement ID	Description	Release
NFR-001		Implemente
	support CHA, oneM2M should consider RESTful styles and approaches while	d in Rel-1
	designing the M2M architecture.	
NFR-002 The oneM2M System should communicate using protocols that are efficier terms of amount of exchanged information over amount of exchanged data		Implemente d in Rel-1
	measured in bytes.	

# Annex A (informative): Requirements for the next release

The requirements contained in this Annex are gathered and targeted for the next release of oneM2M.

- 1 Functional Requirements
  - 1.1 Overall System Requirements
  - 1.2 Management Requirements
  - 1.3 Semantics Requirements
    - 1.3.1 Ontology Related Requirements
    - 1.3.2 Semantics Annotation Requirements
    - 1.3.3 Semantics Query Requirements
    - 1.3.4 Semantics Mashup Requirements
    - 1.3.5 Semantics Reasoning Requirements
    - 1.3.6 Data Analytics Requirements
  - 1.4 Security Requirements
  - 1.5 Charging Requirements
  - 1.6 Operational Requirements
  - 1.7 Communication Management Requirements
  - 1.8 LWM2M Interworking Requirements
